Inspired by an era when W.W.II aircraft became a vital extension of the pilots and crew that flew them, Airborne Cycles has created a new line of titanium frames and complete bikes to recapture that spirit.

Airborne Titanium Frames are built with certified aerospace grade 3AL/2.5V titanium tubing. Our frames are extra stiff, lightning quick and priced very down to Earth.

Available manufacturer direct through Airborne, no middlemen, no sales commissions, no retail markup, just the best product sold wholesale at an unbeatable price.

Frame Finish: Hand Polished is the standard finish on high end titanium frames. Brushing is produced by a meticulous polishing technique using various grades of abrasive pads. It is the most durable finish. Any nicks or scrapes can be touched up with a little bronze wool or Scotch Brite.
