Material: 3AL/2.5V Titanium Alloy (3% Aluminum, 2.5% Vanadium, 94.5% Titanium) Tubing

The Superfortress rear triangle is comprised of a bi-axially ovalized 31.8mm mono-stay with oversized (22.9mm) curved chain stays and seat stays. Optimized for long armed brakes, the curved seat stays produce incredibly stiff braking performance. The curved chain stays provide increased heel and tire clearance. 7mm thick CNC machined vertical dropouts finish the rear triangle allowing quick and easy wheel changes.
