MUIRWOODS

Every Mountain bike in the Marin range offers high performance.

The Muirwoods is no exception and yet there's no high performance price.

The unique Marin ride is guaranteed with the oversize downtube stiffening and controlling the twist in the head tube and bottom bracket. Frames of this quality usually come on mountain bikes with a far higher price tag. Take a longer look at the Muirwoods.

It's a lot of bike for less than you think.

PALISADES TRAIL

The mountain bike from Marin that has certainly caught the professionals eye. Its performance has been well documented.

Winning Magazine – "Frame geometry provides confident and precise handling . . . Out on the trail the Palisades was impressively stable . . . and agile enough to cope happily . . . Marin have put a lot of effort into putting together a well rounded package."

Bicycle Action – "Off roaders will undoubtedly find the Palisades Trail to be a bike which performs well beyond the supposed limits of its price tag. The frame is good enough to be sold for a much higher price . . . So herein lies the Palisades key to value."

BEAR VALLEY

To any enthusiastic mountain biker the Bear is really a wolf in sheep's clothing. With our now famous sloping top tube design which reduces weight and increases stiffness through reduction of the front and rear triangles, the Bear, in our unique matt paint finish exudes sophistication and class.

Slotted cable guides enable you to easily clean mountain bike cables. By reducing the amount of cable housing, control robbing outer cable is reduced, giving more precise and accurate braking.

Mountain Biker sums up the Bear Valley's performance: "The Bear Valley is a great mountain bike ... you'll have to get very good before you outgrow its limits."

ELDRIDGE GRADE

As a newcomer to our 1990 range the Eldridge has been developed with all the experience and knowledge of Marin's top flight designers.

With oversize tubes, round rings, short cage mech, clips and straps the Eldridge has everything to boost your performance.

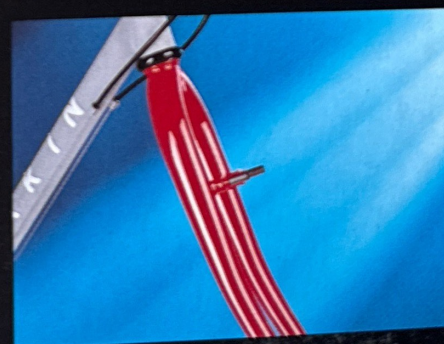

For 1990, we have developed a brand new fork for our top line bikes. Using an oversize steerer and oversize blades the new fork is stiffer, yet lighter than ever. Combined with a new shape, curving evenly from the crown, these forks give precise, confident handling in the most extreme situations.

PINE MOUNTAIN

Incorporating the same design features as the Team Marin, the Pine Mountain offers no compromise race performance — that won't break the bank.

One of the most popular mounts on the racing circuit, the Pine will take you to the front.

Incorporating four oversize tubes, including an 1 1/8" headset the Pine Mountain's looks give you no doubts as to its function. It is an out and out race winner.

Naturally, we use the very best components on all of our machines: that means Shimano. Always at the forefront of component technology, there is no other choice!

Shimano. Always at the forefront of component technology, there is no other choice!

TEAM MARIN

Our flagship gives heroic performance time after time, race after race. No expense has been spared on this top line machine. It boasts super narrow rims and a full Shimano XT STI group. Naturally for race winning performance we've used oversize Prestige tubing from Tange renowned for its strength to weight ratio. Ride a Team Marin and you'll ride to the top.

INSPIRATION

Most mountain bike designers have nothing more inspiring outside their windows than their office car park.

If there is only the straight and level to test out your latest geometry, you are going to find designing an uphill struggle.

Not so for Marin Mountain bikes. Our headquarters are right on the doorstep of Mt. Tamalpais, where the mountain bike was invented. Marin County, California boasts one of the most technically demanding and downright dangerous bikescapes on the planet, so when we discuss the relative merits of head angles or chainstay lengths, we do so after testing our bikes at 50 mph on the rocky hillsides all around. So it seemed only natural to us that the names of our bikes should come from the famous trails in Marin County where all our bikes are created.

MARIN COUNTY
Home of the Mountain Bike

With our headquarters so ideally placed, it's small wonder we produce

some of the most technically advanced and up to the minute mountain bikes you'll find anywhere in the world.

TEAM EFFORT

Every racing season Marin's top team racers push their bikes to the limit. Facing fierce competition, designs are constantly challenged. Our quest for continuous improvement means that this year's bikes are the best yet.

FRAME CONCEPT

Mountain bikes can look similar – but don't be fooled. Look to the heart of the bike – the frame. It is here that Marin's philosophy is to give you the best quality possible whichever model you choose. The frame of your mountain bike determines how well your bike will perform, how light it will be and how long it will last. Top brand name

Japanese tubing makes all our mountain bikes stronger, lighter and more resilient than all of our major competitors.

OVERSIZE SOLUTIONS

In 1989 we were using and testing oversize tubing on the Marin Team Titanium and it worked superbly. For 1990, Tange have developed oversized tubes in cromoly, so, all the advantages which were last year only available on the Team Titanium, are now available on all of our 1990 models.

Because we've put years of time and expertise into design geometry, materials & finish, our frames are the latest in technology and innovation.

FINAL COAT

To protect our frames from the elements and the knocks and grills

that every mountain bike has to endure, Marin have developed a unique paint finish: ZOLATONE 2000. This is a tough matt polyurethane coating which includes special hardening resins and plastics to make each frame tougher than the going.

If you're not riding Marin . . . you're still on your way up.

Mountain Bikes are not indestructible. Excessively rough use may result in damage to yourself and your machine – take care.

Notes: Sizes 15.5", 17.5", 19.0", 20.5" measured centre B.B. centre T.T.

Stems – Length varies according to size

*15.5" bike has Seat Stay Mounted U-Brake + U.2.
