The image features a dark, textured background with a diagonal band of light and green splatters. The band is dark with a lighter, almost white, edge, and is covered in numerous green, irregular spots of varying sizes. The overall effect is reminiscent of a microscopic view or a high-contrast, low-angle shot of a surface.

UNIVEIGN

Choosing the right bicycle will give you years of cycling pleasure. The bike that's right for you is the one that meets your expectations of performance, style and value. One that suits *your* type of cycling. At UNIVEGA, your cycling needs and enjoyment are our foremost concern.

UNIVEGA bicycles are created by cycling enthusiasts who thrive on the challenge of blending new frame designs, the latest components and contemporary styling to produce the best 'balanced' bicycles. Whether you want to ride around the block, take a jaunt into the country or master the mountains, UNIVEGA bicycles feature the precise handling, superior design and unmatched quality you're looking for.

UNIVEGA designers begin with the frame, a bicycle's most important component. All tube dimensions and frame angles are carefully orchestrated to ensure the best possible match between rider, frame size and handling characteristics (see the charts on page 21 for details). Because TANGE brand Chromoly tubing is a strong, lightweight and responsive frame material with the highest performance-to-value ratio, you will find it on all 1990 UNIVEGA bicycles. The Radius bend forks you'll find on most models combine optimum strength and light weight with excellent shock absorption and superb styling.

Our designers also pay close attention to wheels. They recognize that low wheel weight provides vital benefits

to every cyclist. Alloy rims, with their low wheel weight, have an unquestioned record of reliability and performance. For recreation, light rolling wheel weight makes pedaling a breeze. For the enthusiast, they enhance performance like a tailwind. You'll find alloy rims on every 1990 UNIVEGA bicycle.

After the right frame, fork and wheels are designated for each model, UNIVEGA selects matching components ideally suited to balance the bicycle design equation. It is in this balance that optimum performance is realized. Like great CD sound that is ruined by cheap speakers, good compo-

nents perform well only if the frame, fork and wheels are equally good.

All UNIVEGA bicycles feature the latest in SHIMANO and SUNTOUR "index" drivetrain equipment. Hyperglide, Superglide, and SLR braking are advances which contribute significantly to the smooth polished performance of our 1990 models. Those looking for the latest technology will find UNIVEGA models sporting 21 speeds plus SHIMANO Rapidfire or SUNTOUR X-Press shifters.

UNIVEGA craftsmanship is visible in every aspect of our bicycles, but nowhere is it more evident than in our brilliant,

durable finishes. Many 1990 models are highlighted by an innovative "Radiant" painting technique that produces a remarkable visual depth unlike any finish you've seen.

With stunning cosmetics, high-performance components and "customized" frame specifications, UNIVEGA designers blend aesthetics and technology to create bicycles that will give you the finest in performance and value.

For 1990, eight new and exciting UNIVEGA models define the range of ATB performance. Whether you're looking for a leisurely ride in the park or hard-bitten competitive mountain cycling, there's a UNIVEGA ATB for you.

ACTIVA and ROVER models are designed for recreation. The ACTIVA bicycles are unique, blending all-terrain frame design with easy-rolling, lightweight 700C alloy wheels and smooth riding 38C tires. The ACTIVA component selection maximizes rider comfort and control while emphasizing on-road enjoyment. The ROVER STI is more aggressive and 'high-tech', sporting 21 speeds and the new Rapidfire shifters.

The ALPINA series offers five models in two categories: Off-Road Performance and Off-Road Competition. The three ALPINA Performance models are designed for enthusiasts and fitness riders who intend to push themselves and their equipment beyond the "recreational". This series features ALPINA TANGE Chromoly frames with mountain frame geometry and handling. Lightweight alloy wheels and components, the latest indexed gearing systems and 21-speed drivetrains complete the picture. ALPINA Performance bicycles handle on-road or off-road conditions with comfort, efficiency and excitement.

The ALPINA TEAM and ALPINA PRO have competition at heart. Featuring TANGE triple-buttied tubing and oval Chromoly Radius bend forks, these hot performers love the dirt. RITCHEY's welded alloy 32-hole Vantage rims and Megabite Harddrive tires combine to reduce wheel weight on these models by a pound compared to standard competition wheels! SHIMANO's Deore XT and LX component groups have what it takes to match the superb frames, forks and wheels of the TEAM and PRO.

If you want the most from an ATB, look closely at UNIVEGA for 1990. The more you see, the more you'll like our balanced designs, hot performance, great looks and outstanding values.

ALPINA TEAM

FEATURE PRESENTATION

The ALPINA TEAM gets top billing for features and performance. The all-star cast includes the SHIMANO Deore XT group with 21-speed Hyperglide drivetrain and round Superglide alloy chainrings. The Rapidfire under-bar index shifters are unbelievably smooth, and RITCHEY 32-hole 17mm Vantage Comp rims, Megabyte Harddrive tires and a VETTA-skin Turbo Gel saddle give you the edge. The ALPINA TEAM: now showing in the mountains near you.

PRESTIGE

ALPINA PRO

FEEL THE HEAT

The ALPINA PRO puts the heat on the competition. The frameset is state-of-the-art: TANGE triple-butted Chromoly tubing and Alpina Radius bend Chromoly forks with custom forged drop-outs make it light-weight and race-ready. It's equipped with SHIMANO's Deore LX group, featuring a Hyperglide 21-speed drivetrain, Superglide alloy chainrings and heat-treated alloy MTN bars. The RITCHEY 32-hole Vantage Expert alloy rims, Megabyte Harddrive MTN tires and the VETTA Turbo saddle complete the hot set-up!

ALPINA SPORT POWER TO THE PEDAL

Move up in the off-road category with the ALPINA SPORT's high powered specifications starting with high performance MTN frame geometry in TANGE triple-butted Chromoly and matching Chromoly Radius bend fork. The SHIMANO 500LX 21-speed Hyperglide drivetrain features Superglide alloy chainrings and the latest Rapidfire under-bar shifters for incredibly smooth power shifting. TOPGEAR's aggressive 'Evil Twin' MTN tires, ARAYA's 26 x 1.5 welded alloy rims and SR Low-Fat pedals combine to make the ALPINA SPORT a true off-road performer.

ALPINA TRAIL

A NATURAL MOVE

The ALPINA TRAIL'S SUNTOUR X-press index shifters put shifting where it belongs – under the handlebars and under your thumbs. The TANGE triple-butted Chromoly frame and Radius bend Chromoly fork combine with SR's GXC Powering crankset, SUNTOUR's XC-Master 21-speed drivetrain and VETTA Gel saddle to make the ALPINA TRAIL a 'natural' for performance and value.

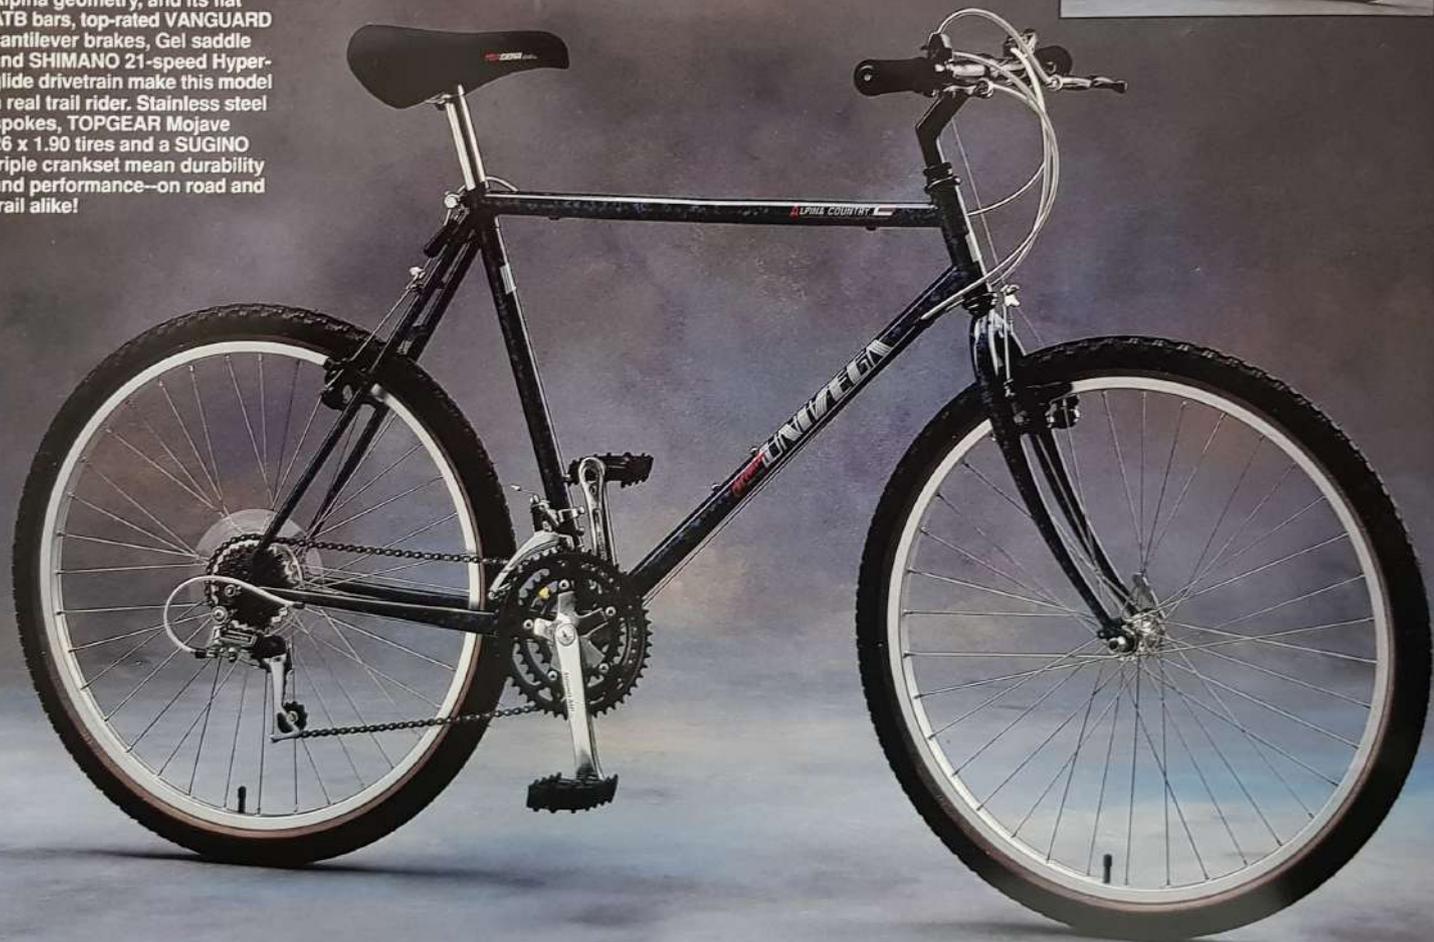

ALPINA COUNTRY

HIT THE TRAILS

The rugged, versatile ALPINA COUNTRY takes you just about anywhere. The TANGE Chromoly frame has Alpina geometry, and its flat ATB bars, top-rated VANGUARD cantilever brakes, Gel saddle and SHIMANO 21-speed Hyperglide drivetrain make this model a real trail rider. Stainless steel spokes, TOPGEAR Mojave 26 x 1.90 tires and a SUGINO triple crankset mean durability and performance—on road and trail alike!

ROVER STI GOING HIGH-TECH

The ROVER STI features virtually all that's high tech for 1990. SHIMANO's new 200GS group sports Rapidfire shifters, 21-speed Hyperglide gearing and Superglide front chainrings. Add our Radius bend fork, low friction SLR braking, ARAYA ATB alloy rims and TOPGEAR Mojave tires, and you've got a high tech recreational bike without the high end price!

COUNTRY MAX

This rugged bicycle is equipped with 24" wheels, flat handle-bars, and a very sporty look. The sizing makes it ideal for riders who prefer the comfort of a smaller bike.

ACTIVA-ES PRIME TIME RIDE

The ACTIVA-ES is loaded with features to cure your hill street blues. We've combined a TANGE Chromoly frame with ARAYA alloy rims, SHIMANO 18-speed Index gearing and a SUGINO triple alloy crankset to help you level out the hills. Add a TOPGEAR Gel saddle, Hyperglide shifting and 60mm rise ATB handlebars and you've got a bike that's 'primed' for the road!

ACTIVA-ST UPDATE YOUR PASTIME

The ACTIVA-ST is a light, all-purpose bike designed for recreational riding. SHIMANO's 12-speed index shifting, Hyperglide gearing, and ARAYA alloy rims give you smooth, responsive performance. And the anatomic saddle, 60mm rise ATS handlebars, and rugged TANGE Chromoly frame provide comfort and durability. All the features you need to get you back into cycling at a price to make you nostalgic.

VIA MONTEGA THE BEST OF BOTH WORLDS

The new VIA Series combines rugged ATB styling with lightweight road bike performance. The frame design of the VIA CARISMA and VIA MONTEGA combines the lightweight responsiveness of TANGE Chromoly road tubing with the off-road strength of TIG welding. By also matching lightweight rims with more aggressive tires and multi-talented off-road components, UNIVEGA's VIA bicycles handle trails, rough pavement or long distance tours with confidence and ease. To expand your cycling options, ride a UNIVEGA VIA bicycle.

The VIA MONTEGA takes you down the road and into the dirt. This model sports a full TANGE triple-butted Chromoly frame with lightweight alloy components and rugged ATB features. SHIMANO's new 500LX group with Rapidfire shifting highlights a 21-speed Hyperglide drivetrain.

PANARACER's '38 Special' 700C wide track tires, ARAYA 16A rims and Chromoly fork are set against UNIVEGA's brilliant new Radiant and Pearl finishes. VIA MONTEGA combines durability and comfort with high-performance to give you the best of both worlds!

VIA CARISMA

A WINNING COMBINATION

On one hand, the VIA CARISMA shapes up as a great road bicycle: lightweight TANGE Chromoly frame (including a special mixte version), Radius bend fork, SHIMANO 300LX drive-train and 700 x 38C tires mounted on ARAYA alloy rims. When you add the ATB comfort and performance of a VETTA Gel saddle, SHIMANO's latest Rapidfire under-bar shifters, solid cantilever braking and wide range gearing you get a winning combination!

For 1990, six UNIVEGA lightweight bicycles offer you outstanding choices for competition, performance and sport cycling.

Because the frame is the heart of every bicycle, frame material is a critical choice for designer and cyclist alike. In recent years, alternative frame materials have provided new options in various cycling applications. But after an extensive search for a frame material with the best balanced set of superior features — a material that does everything well — UNIVEGA chose Chromoly. No other material matched Chromoly for across-the-board handling responsiveness, light weight and durability.

That's why you'll find at least three tubes of TANGE

Chromoly in every new UNIVEGA, as well as TANGE Prestige tubing on the top-of-the-line SUPERSTRADA. To enable you to get the most out of our fine frames, we've custom-designed frame geometry so that each frame size handles beautifully and fits correctly (please see page 21 for details). Our competition and performance models even come in 2cm size intervals for a more precise fit where it's needed.

Innovative Radius bend forks are used extensively on the 1990 line because they're outstanding in performance, light weight and elegance.

Since wheel weight contributes so much to cycling ease and performance, every 1990 UNIVEGA is equipped with lightweight alloy wheels. Our designers slashed wheel weight even more on the SUPERSTRADA, GRAN RECORD and GRAN PREMIO by utilizing super-lightweight 32-spoke rims and hubs.

It takes well-coordinated components to round-out great bicycles. For 1990 you'll see SHIMANO index gearing, Hyperglide freewheels and SLR aero brakes featured for their contributions to cycling efficiency, quality and styling. Racers, triathletes and enthusiasts will also appreciate the high-cadence round chainrings specified on our High Performance models.

Most striking for UNIVEGA 1990 are the stunning "Radiant" and "Web" special finishes. Our Radiant colors have a visual depth unlike any finish you've seen.

From all points of view, the 1990 UNIVEGA road bicycles demonstrate superb craftsmanship, performance and beauty. See them and discover the difference.

SUPERSTRADA LEADER OF THE PACK

Get on the SUPERSTRADA and go for the yellow jersey-- it's a racing bike from top to bottom. Featuring SHIMANO's new Ultegra group with Hyperglide freewheel and Superglide chainrings, this bike is *all* high tech: ARAYA 32-hole CTL-370 superhard-anodized rims, SHIMANO *Clipless* pedals, TANGE Prestige Chromoly frame and a VETTA Turbo Gel leather saddle. With specs like these, the UNIVEGA SUPERSTRADA can take you to the front.

GRAN RECORD

THE COMPETITIVE EDGE

The GRAN RECORD is a serious road bike for competitors and enthusiasts alike. A TANGE triple-butted frame with investment cast seat lug, hard-anodized ALESA 32-hole Aero rims and Technova II tires make it a race-ready performer. Now add SHIMANO's stunning New105 group, Superglide chainrings, and a VETTA Turbo Gel saddle and you've got all the competitive edge you'll need!

GRAN PREMIO

FIT TO BE TRI'D

The GRAN PREMIO has been designed for the challenges triathletes and road racers face in training and competition. The GRAN PREMIO makes an impressive start with its TANGE double-butted Chromoly frame (sized in 2cm intervals) and Radius bend Chromoly fork. It finishes equally strong with a full SHIMANO 500EX group with Hyperglide and high-cadence round chainrings, ALESA 32-hole alloy rims and VETTA Mundial racing saddle. "Tri" it today.

NUOVO SPORT

GET PHYSICAL

The NUOVO SPORT is our fitness star. It boasts a SHIMANO 300EX 14-speed drivetrain with Hyperglide gearing and ALESA 415X alloy rims for smooth, dependable performance. The TANGE Chromoly frame and Radius bend uncrown fork handle your toughest workout. And SHIMANO's effortless SLR braking, TOPGEAR's Gel saddle and an outstanding Radiant finish make keeping fit a breeze!

SUPRA SPORT

EXPECT THE UNEXPECTED

The SUPRA SPORT is a prime example of how much value UNIVEGA delivers for a surprisingly moderate price. By blending a TANGE Chromoly frame with a SHIMANO 12-speed Index drivetrain and alloy components, the SUPRA SPORT delivers an exceptional ride. Aero SLR brake levers, the TOPGEAR Gel saddle and a unicrown racing fork are features you wouldn't expect at this price!

MAXIMA SPORT MAXIMUM FUN

The MAXIMA SPORT is a lightweight bicycle that's ideal for fitness and recreational riding. It features UNIVEGA craftsmanship, performance and value in details like its Chromoly frame, SHIMANO Index gearing and DIA-COMPE alloy sidepull brakes. The TOPGEAR anatomic saddle, brake extension levers and dual color finishes will have you riding in maximum comfort and style!

1990 UNIVEGA FRAME GEOMETRY

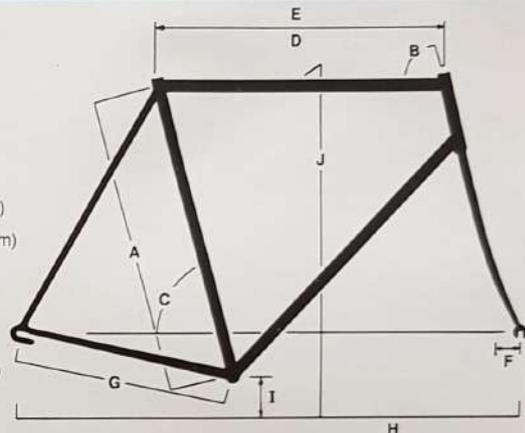

For 1990, UNIVEGA frames are designed with state-of-the-art geometry that is ideally suited for each cycling category. Handling, riding and comfort characteristics are fine-tuned through frame engineering to maximize cycling performance.

Within each frame style, tube lengths and frame angles are individually selected for optimum fit in each size.

Component fit is also important, so UNIVEGA designers have coordinated the sizes of handlebars, stems, toe clips and crank arms to match each frame size as well.

At UNIVEGA, bicycle expertise, design integration and attention to detail make the difference.

- A. Seat tube length (mm)
- B. Head tube angle
- C. Seat tube angle
- D. Top tube length, actual (mm)
- E. Effective top tube length (mm)
- F. Fork rake (mm)
- G. Chainstay length (mm)
- H. Wheelbase (mm)
- I. Bottom Bracket height (mm)
- J. Stand-over height (mm)
