Perfected

by the Volvo/Cannondale team during the '97 race season, the Super V DHF is a radical new downhill-specific beast with a computerized HeadShok suspension fork (see sidebar on opposite page), an innovative linkage design that delivers six inches of rear wheel travel (patent pending), and a unique jack-shaft style drivetrain (see sidebar on opposite page).

The Super V DHF's compact, four-bar linkage gives the bike a migrating, or dynamic pivot. By customizing the pivot's location at each point in the swingarm's arch, we're able to give the DHF the plush, "HyperActive" response of a high-pivot design, but with a low-pivot bike's immunity to pedaling forces.

The DHF is outfitted with the new HeadShok Moto DH Pro fork (patents pending) featuring 150 mm of travel and a telescoping blade/triple-clamp design. Each leg of the DH Pro has 88 needle bearings rolling between corresponding flats, or races, on its inner and outer tubes. Virtually eliminating stiction, the needle bearings allow super-smooth telescoping action and replace the collar-like bushings that prevent other telescoping-blade forks from responding to small and medium impacts. The flats also prevent the inner tubes from twisting within the outer tubes, ensuring rock-solid handling and crisp, precise steering that conventional telescoping-blade forks can't possibly match.

Photo ©Bliss Images

To eliminate flex, the Super V DHF uses compact links, massive, four-inch wide pivots and beefy 17 mm axles with sealed cartridge bearings. Other manufacturers' rear suspension systems feature long links and plastic pivot bushings that lead to power-robbing rear-end flex, a resulting loss in tracking precision, and increased maintenance costs.

Changing the four front cogs in the Super V DHF's drivetrain gives an effective front chainring range from 20 to 80 teeth. This wide range of available chainring "sizes" causes no variation in the critical chainline-to-pivot relationship because the larger, 32-tooth ring that actually drives the freewheel never changes size.

The Moto DH Pro fork's on-board computer electronically controls four separate suspension functions: compression, rebound, bottom-out and top-out damping. The performance of each function is dictated by an independent graph stored in the computer's microprocessor. Together, the four functions make up a performance "map;" one of five maps that a rider can choose between on-the-fly. Additional maps, and the ability to alter each individual graph within a map, are included in the PC-based Windows/Windows 95-compatible software that communicates with the fork via an infrared link. (Patent pending)

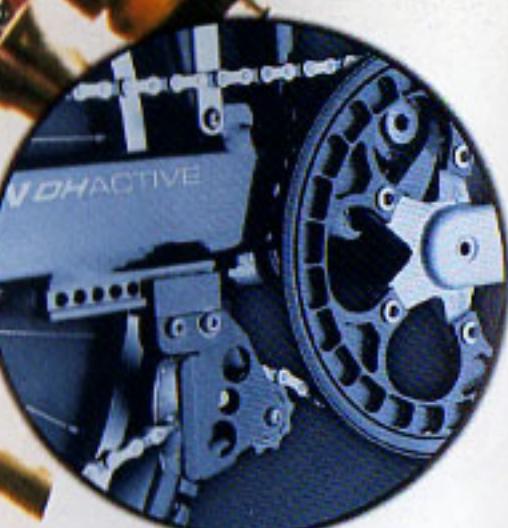

Photos ©Mountain Biker Magazine

If you're in the market for a pure downhill thoroughbred, it's hard to argue with the Super V DH's pedigree. Developed with input from Volvo/Cannondale riders Myles Rockwell and Missy Giove, the Super V DH won six races in its first six weeks on the pro circuit and multiple design awards in the following months.

Available as a frameset for 1998, the Super V DH has a beefy, lightweight flex-free aluminum swingarm that's coupled to the main frame assembly with a super-rigid single pivot and durable sealed cartridge bearings. The pivot itself is located just above and behind the bottom bracket where it delivers 150 mm of rear wheel travel and full-time, "HyperActive" response while eliminating any trace of chain-pull, squat or bobbing. And unlike URT (unified rear triangle) designs that move the crankset to the swingarm, the Super V DH remains plush and supple even when you're standing on the pedals.

The Super V DH comes spec'd with a HeadShok Moto DH fork, which offers up 120 mm of travel and an incredible range of adjustability. Besides an easily set preload, the fork's five-position Damping Dial, compression, rebound, oil viscosity, and head angle can all be customized. The Super V DH also comes with a super-stiff CODA Moto hub, disc brake mounts, and a total of three independent chain-retention devices.

In two years' of World Cup competitions on the planet's toughest courses, the Volvo/Cannondale downhillers have never thrown a chain. The reason: The Super V DH's unique independent chain retention devices.

SUPER V DH FRAMESET

Super V DH frame: Race proven around the world

HeadShok Moto 120 downhill fork with hub (disc rotor not included)

CNC-machined chain-retention devices

After winning six races in its first six weeks on the pro circuit, the Super V DH racked up victories off the mountain as well. After first capturing VeloNews' "Technical Development of the Year" award, the Super V DH was voted the "All-Time Best Downhill Suspension Bike" by Mountain Bike Action Magazine, and named a winner in I.D. Magazine's Annual Design Review, America's oldest and most prestigious design competition.

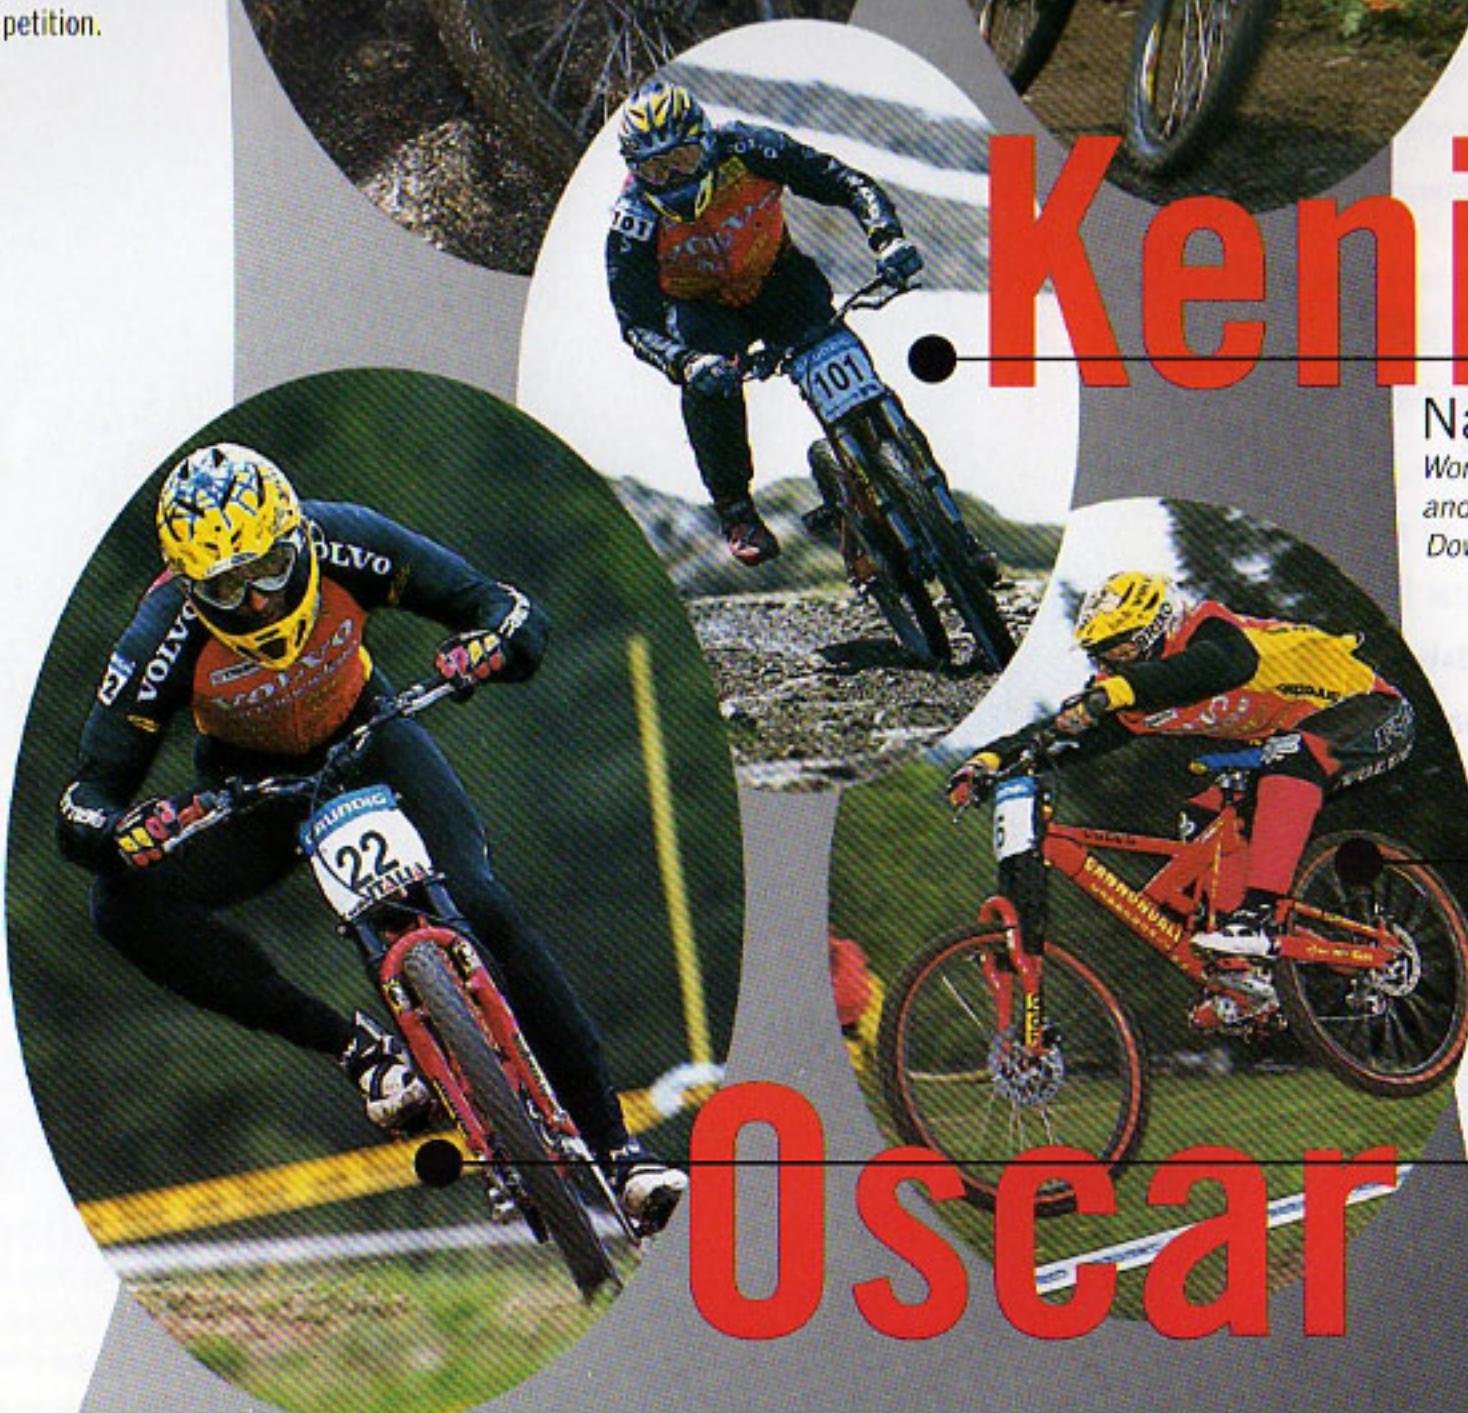

Missy

Giove was last year's defending World Cup Women's Downhill Series Champion, and the winner at the World Championships in 1994.

Myles

Rockwell hit speeds of up to 58 m.p.h. to win both the Mammoth Mountain NORBA National and the Reebok Eliminator in one incredible weekend.

Kenichi

Nabeshima was sixth at the 1996 World Cup downhill race at Mammoth, and the silver medalist in the All-Japan Downhill Series the previous year.

Kim

Sonier blazed to three top-ten finishes in the first three World Cup downhill events last year.

Oscar

Saiz took second place at the Pittsburgh, Pennsylvania, NORBA downhill race last year, finishing less than half a second off the winning time.

T

he

revolutionary full-suspension

Super V Raven brings an organic
approach to bicycle frame design.

Like the human body, the Raven uses a skeleton and skin, each performing separate functions, each created from a different material, each uniquely suited to the demands of its assigned tasks.

The Raven (multiple patents pending) is more than half a pound lighter than our aluminum Super V frame, and is built around a lightweight, investment-cast aluminum spine. Two carbon fiber skins sandwich the spine, with the edges of the skins fitting precisely into corresponding channels along the spine's lateral faces.

The Raven's spine delivers strength to withstand loads along the frame's vertical plane and provides secure mounting points for the bike's headset, bottom bracket, seatpost, and swingarm. The durable, light-weight skins, bonded to the spine with an epoxy resin, resist the torsional and horizontal loads generated when you hammer on the pedals. The rigidity of the frame is perfectly complemented by the rigidity of a welded, tubular aluminum swingarm. Jump on the pedals, and the Raven flies forward with an explosive transfer of power to the rear wheel.

Tinker

Juarez represented the U.S. at the 1996 Summer Olympics, and is a World Championships Silver Medalist and two-time NORBA National Champion.

Photo ©Malcolm Fearn/Bliss Images

SUPER V RAVEN

The greater the interface between two glued surfaces, the stronger the bond. The two long glue lines around the perimeter of the Super V Raven create an incredibly resilient bond that's far more durable than the antiquated "tube-glued-in-a-lug" approach.

The Super V Raven's unique construction combines an aluminum spine sandwiched between lightweight, carbon fiber skins. The beefy aluminum spine absorbs in-plane (vertical) loads, and the carbon fiber skins resist torsional (pedaling-induced) loads for efficient, flex-free performance.

The CODA 900M crankset (standard equipment on the Super V 4000, Super V 3000 Raven and other models) powered Alison Sydor to an unprecedented three consecutive World Championship titles. From its hollow, elliptical crankarms to its oversized axle and unique bearing placement, the 900M crankset sets the standard for innovation, light weight and rigidity.

The HeadShok Fatty SL fork spec'd on the Super V 2000 Raven (and other models as well) combines air-sprung/oil-damped performance with a five-position Damping Dial that adjusts the suspension on-the-fly. The three pound Fatty SL also features lightweight, tapered alloy blades, a front disc brake mount, and our patented, (#5,320,374) needle bearing-equipped, telescoping steerer design.

After noticing how more and more riders were modifying full suspension bikes for hard-core, long-travel thrashing, we thought we'd let you side-step the hassle and expense of upgrading by offering bikes spec'd specifically for full-contact riding. The result: Our two Super V Freeride models. (Freeride: A term borrowed from snowboarding, freeriding refers to all-mountain riding with plenty of air time. It's what you do.) Ready to hammer right out of the box, the Freeride bikes feature riser handlebars and the widest gear range possible.

Both of the Freeride models are built around our Super V full-suspension frame (see page 12), and equipped with a long-travel Fox Vanilla RX shock for 120 mm of rear wheel travel. In front, a HeadShok Moto FR fork provides 100 mm of travel. Each leg of the Moto FR has four sets of needle bearings rolling between pairs of corresponding flats, or races, on the upper and lower tubes. The fork's 176 needle bearings deliver great small-bump response by eliminating the stiction caused by the collar-like bushings found on other telescoping-blade forks. The four pairs of flats on each leg also improve the fork's performance by preventing the inner tubes from twisting within the outer tubes, delivering rock-solid handling and crisp, precise steering.

(For more information on the Moto FR, turn to page 18.)

The CODA 1000 Compact Disc brake uses a hydraulic fluid developed by the defense industry to control the tail fins on ICBM missiles. Extremely resistant to temperature changes, the fluid retains a consistent viscosity and volume in both hot and cold conditions.

*Super Black with
Mango fork (BLK)*

SUPER V 1000 FR

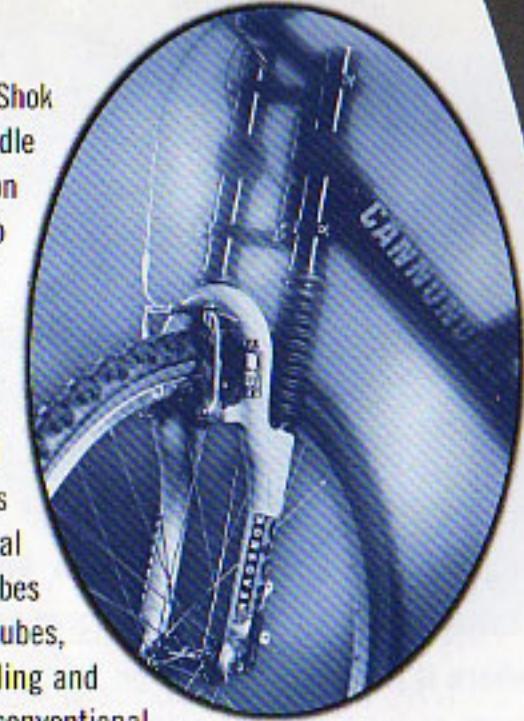

Super V frame with 120 mm of rear wheel travel

HeadShok Moto FR fork:
100 mm of travel

Shimano XT/XT with LX
V-brakes

LX hubs with Mavic
221 rims

Each leg of the HeadShok Moto FR has four sets of needle bearings that eliminate stiction to deliver great small-bump response. The bearings roll between matching "flats" or races on the stanchion and slider tubes. Besides providing surfaces for the bearings to roll on, the flats also improve the fork's performance by resisting torsional loads. By preventing the inner tubes from twisting within the outer tubes, the flats deliver rock-solid handling and crisp, precise steering that conventional telescoping-blade forks can't possibly match.

The often-imitated, award-winning Super V owes its full-time HyperActive performance to a swingarm pivot location that isolates the swingarm from pedaling loads and virtually eliminates chain-pull, lock-out, squat and bobbing. The Super V also has its bottom bracket and crankset on the main frame assembly (where it belongs!) and not on the swingarm like a URT design (unified rear triangle). By avoiding the now widely debunked URT approach, the Super V delivers supple response whether the rider is seated or standing.

The Super V also features amazingly precise tracking; an incredible resistance to side-to-side deflection that keeps the rear wheel directly in plane with the front wheel for predictable, spot-on handling. At the heart of the Super V's lateral rigidity is its massive, butted downtube that anchors the bike's flex-resistant, four-inch wide pivot. The pivot itself comes equipped with a beefy through-axle and long-lasting, deflection-free cartridge bearings. The Super V's welded aluminum swingarm, constructed without long, multiple links that eventually cause rear-end flex and sway, also delivers great lateral stiffness for superior handling.

Each Super V model also features 100 mm of rear wheel travel, a rear disc brake mount, and a virtually stiction-free, needle bearing-assisted HeadShok suspension fork.

It's Mind Over Matter

Nothing speaks better for a product than its successes on the race course. And with a collection of field testers that includes mountain bike World Champions Missy Giove and Alison Sydor, multiple Tour de France stage winner Mario Cipollini and triathlon World Champion Simon Lessing, it's no wonder HeadShok suspension systems keep getting better and better.

For '98, HeadShok's cast of suspension forks represents the next stage in modular suspension evolution. Featuring the Motos, Fattys, P-Bones and Silk suspensions, the new forks bring HeadShok's multi-patented technology to mountain, road and city cycling.

The HeadShok Motos, including the new FR, offer beefy dual crown construction and no less than 100 mm of travel. Five-position on-the-fly damping provides a range of suspension settings. The hallmark HeadShok Fattys, with swaged blades and telescoping steerer, feature up to 70 mm of plush travel. Their P-Bone cousins combine the same telescoping steerer design with straight gauge blades. Both the Fatty and P-Bone forks roll smoothly on 88 needle bearings, ultimately reducing friction and improving control. On the road, our line of Silk Road and Silk Path forks incorporate similar technologies to soak up the shock of cobblestones, frost heaves and potholes.

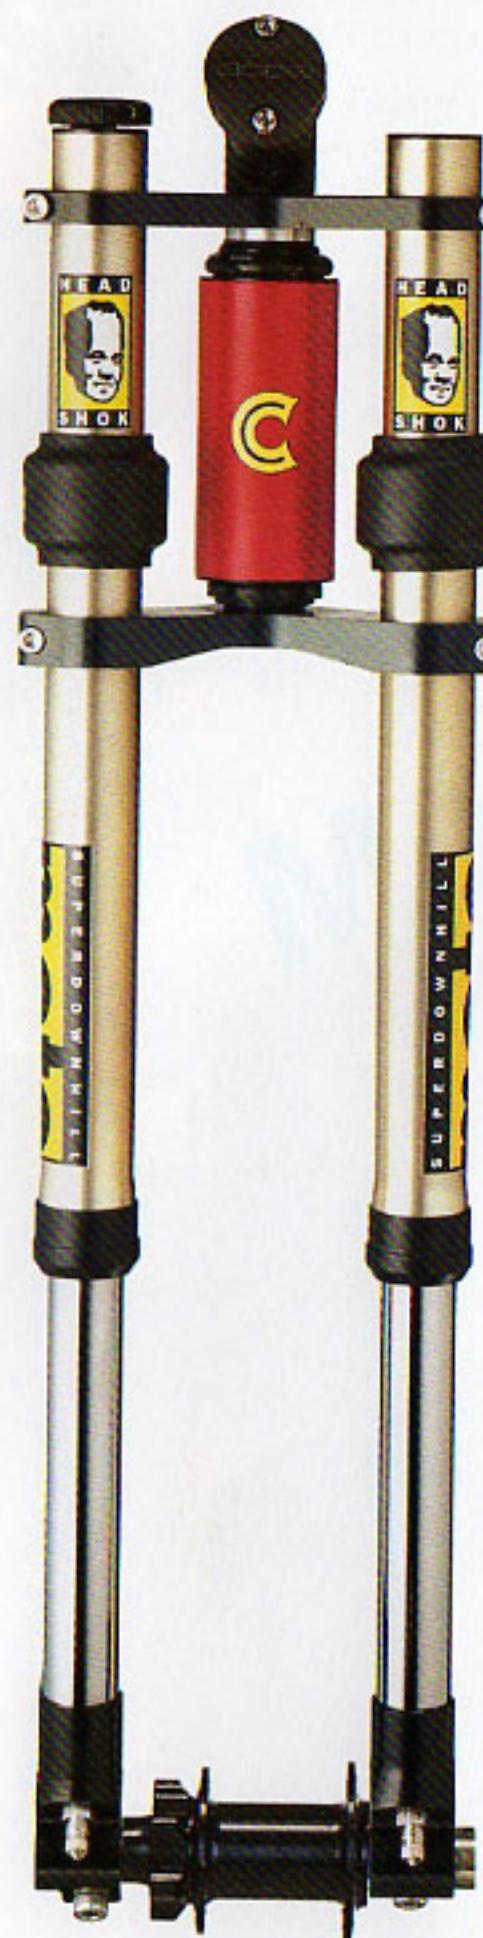

Moto DH Pro

Patented Production Process.
Patented (#5,249,818) fixtureless production process allows easy transfer of feedback from our pro riders into frame refinements.

Butted Tubing. Butted seat, down and top tubes concentrate material at the joints for strength, and shave it away from non-critical areas for dramatic weight savings.

Handmade in America. Every Cannondale frame is built by hand at our Bedford, Pennsylvania, factory.

Wishbone Seatstays. Lightweight wishbone seatstays provide rock-solid braking performance and excellent tire clearance.

Elliptical Chainstays. Lightweight elliptical chainstays provide excellent tire clearance.

CAD³
CANNONDALE ADVANCED ALUMINUM DESIGN

Laser-Cut Miters. Computer-guided lasers cut tube ends to incredibly tight tolerances for greater weld integrity.

6061-T6 Aluminum. Super-lightweight 6061-T6 aluminum tubing allows us to create high-performance, "light-as-titanium" frames.

PowerPyramid Downtube. The PowerPyramid downtube has a tapered wall and large diameter profile near the bottom bracket for lightweight flex resistance and an explosive transfer of pedaling energy. Near the headtube, a thicker wall provides awesome strength.

CANNONDALE FRAMES

FRONT SUSPENSION MOUNTAIN BIKE
BICYCLES & TOOLS
USA

Our

'98 front suspension models

feature one of three lightweight aluminum frames. As light as the best titanium frames, the CAAD3 frame (F2000, F1000) has a unique PowerPyramid downtube that increases in diameter and simultaneously tapers in wall thickness as it nears the bottom bracket. The PowerPyramid's large diameter lower reach provides stubborn flex resistance for an explosive transfer of power to the rear wheel. At the head tube, the PowerPyramid's more conventional diameter has a thicker wall to maximize strength.

Both the CAAD3 frame and the "light-as-metal-matrix" CAAD2 frame (F900, F700, F500, F400) use internally butted tubing to minimize weight. With the exception of the PowerPyramid downtube (the CAAD2 uses a standard butted tube), the CAAD2 is virtually identical to the CAAD3.

The Killer V frame uses a butted seat tube, and a unique patented (#5,201,537) geometry that increases both strength and stand-over clearance. A great choice for larger riders wanting a reinforced head tube/down tube area, the Killer V is also great for riders with shorter legs.

Alison Sydor

Sydor was 1997's defending World Cup Women's Cross-Country Series Champion, and is a three-time World Championships winner and an Olympic Silver Medalist.

Tinker Juarez

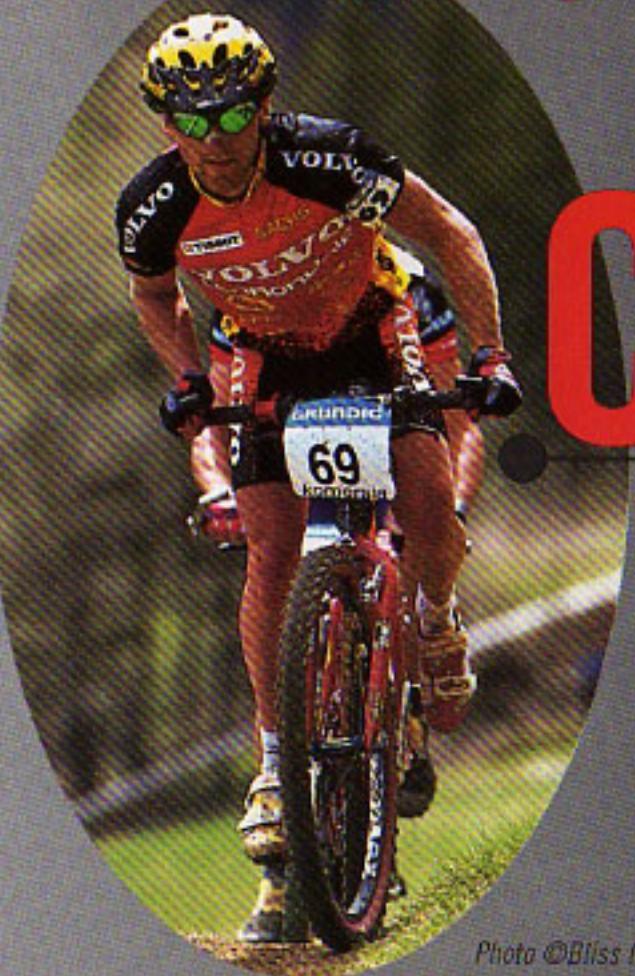

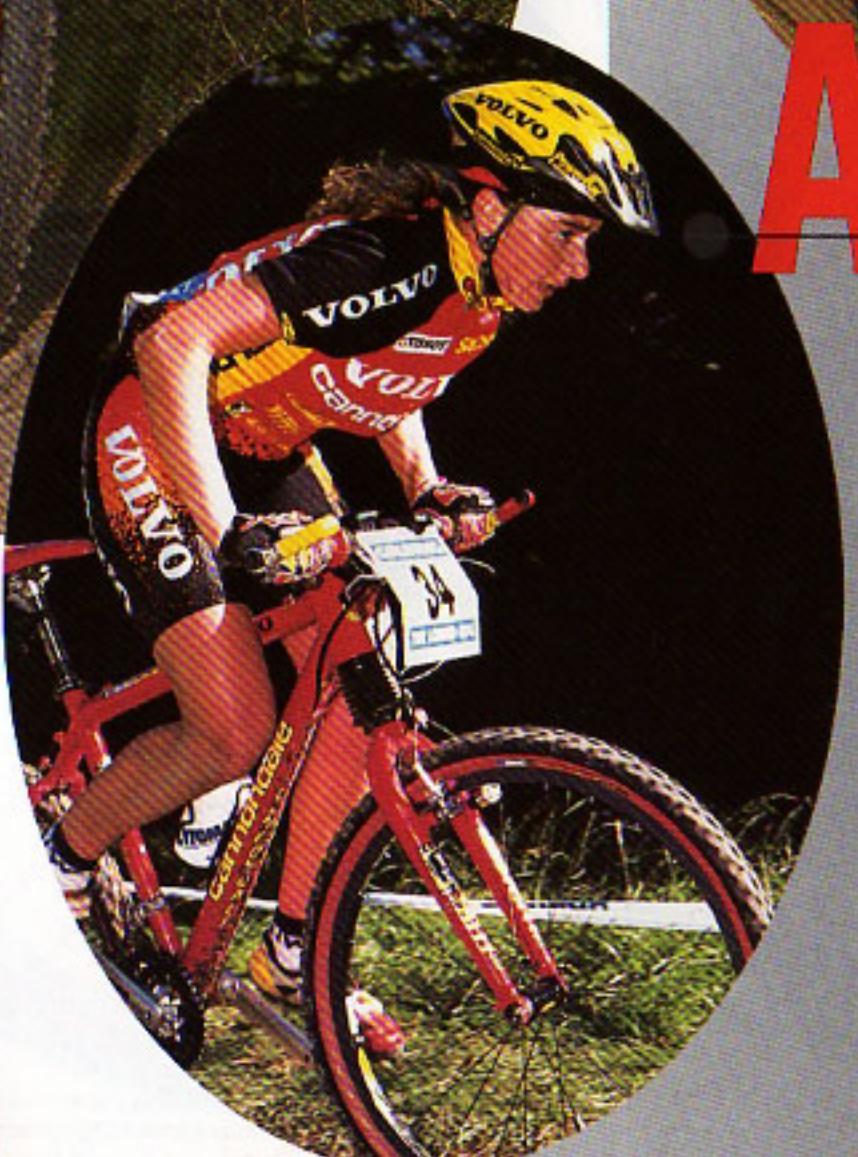

Juarez represented the U.S. at the 1996 Summer Olympics, and is a World Championships Silver Medalist and two-time NORBA National Champion.

1998 CODA Components & HeadShok Suspension Forks

Saeco/Cannondale pro racer Ivan Gotti makes the decisive move on the climb to Cervinia during the 1997 Giro d'Italia. The CODA-equipped racer shed his breakaway companions to win the 14th stage and take possession of the coveted leader's pink jersey. Still "in pink" one week later, Gotti put himself in line for Italian immortality by winning the Giro overall.
Photo by Graham Watson.

Mario Cipollini, 100th Pro Stage Win, Tour of Valencia and an amazing five stage wins at the '97 Giro d'Italia

one¹

CODA 900 DH Crankset

- 628 g • 7075-T6 aluminum construction • 175 or 180 mm • Requires CODA BB3 bottom bracket
- Silver arms, black rings

two²

CODA 900 Road Crankset

- 536 g • 7075-T6 aluminum construction • 130 mm bolt circle • 165-180 mm crank arms • Requires CODA BB2 bottom bracket • Silver arms with black or silver rings

three³

CODA 900 Mountain Crankset

- 556 g • 7075-T6 aluminum construction • 165-180 mm crank arms • Compact (C9HC) or standard (C9SM) • Requires CODA BB3 bottom bracket • Silver arms with black rings

four⁴

CODA 900 Bottom Bracket

- BB2: 240 g, BB3: 270 g • English or Italian threads • Fits 68, 70 or 73 mm BB shell widths

five⁵

CODA Tarantula DH Crankset

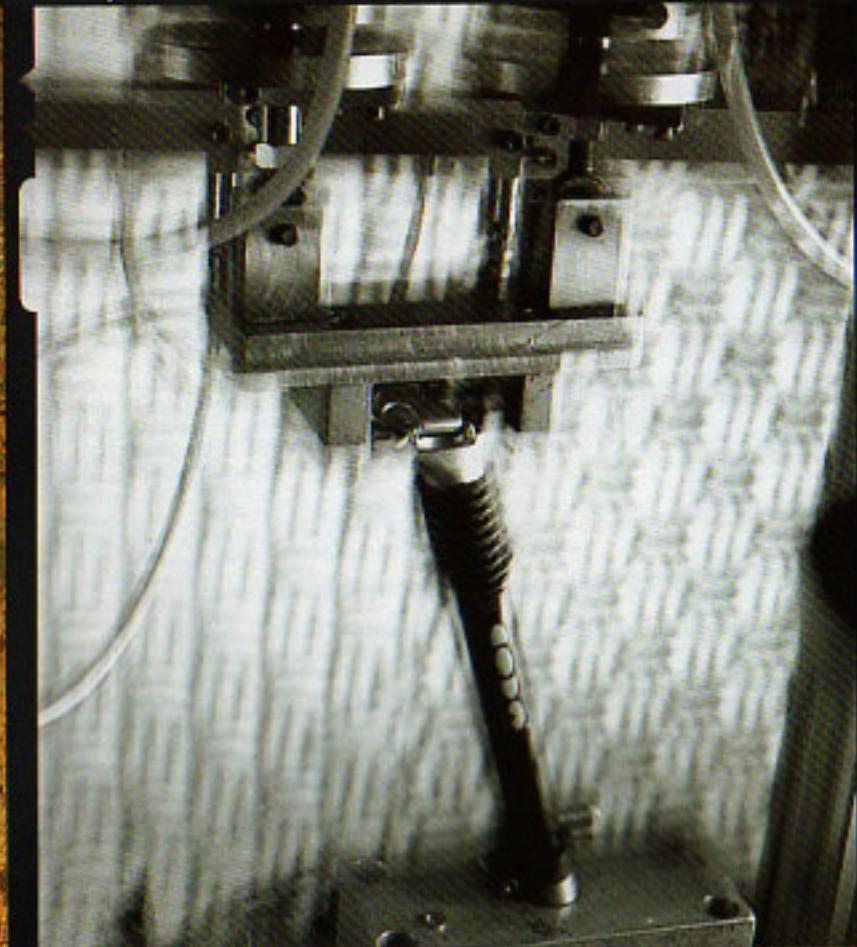

- Aluminum crankarms are milled by digitally-controlled high-precision CNC machines • Low-profile contours • Shorter BB spindle: Less flex, less weight • 175 mm • 48 tooth chainring • 110 BB axle

six⁶

CODA Tarantula SL Crankset

- Unique interchangeable spider makes crankarms compatible with all chainrings • Aluminum crankarms are milled by digitally-controlled high-precision CNC machines
- Low-profile contours • Shorter bottom bracket spindle: Less flex, less weight • Extruded, then CNC-machined spider • Two alloy chainrings with shift pins and a titanium inner chainring ensure long-term lightweight durability • 170-175 mm crank arms • 22/32/44 chainrings • 110 bottom bracket axle

7seven

CODA 900 Clipless Pedals

- Only 360 g per pair • 4 degrees of float • Optical spring tension display • Unique cleat clamp design allows for easy entry and consistent release • Three bearings: a needle roller bearing, an Oil Lite sleeve bearing and a sealed cartridge bearing • New splined (not hexed) easily removable spindle and cartridge bearing ensure easy service and cleaning • Slim pedal profile for maximum cornering clearance • Slim-lip seal prevents contamination of the bearing cartridge • CODA cleats included

eight8

CODA 500 Clipless Pedals

- 372 g per pair • 4 degrees of float
- Optical spring tension display • Aluminum body with high-tech gray finish • Wide cleat clip provides greater contact area
- Unique rear cleat clamp eases entry
- Chrome-moly steel axle slim-lip seal prevents contamination of the bearing cartridge • CODA cleats included

CODA Q-LAB TESTING

The Q-Lab is our state-of-the-art testing facility for bicycle frames, suspension forks and bike components. Located in our Bedford, PA, factory, the Q-Lab subjects our new designs to all manner of cruel and unusual punishment.

Some facts about the Q-Lab:

- We've invested more than half a million dollars developing the Q-Lab.
- The Q-Lab is staffed by 8 full-time employees.
- The Q-Lab is set up to conduct more than 50 different tests.
- The Q-Lab has more than 40 different tests for components.
- Handlebars must pass four separate Q-Lab tests before being spec'd.
- Suspension seatpost designs must go through a minimum of 50,000 compression/rebound cycles to make it out of the Q-Lab alive.

Tinker Juarez, Team Volvo/Cannondale, 1995 & 1996 NORBA National Mountain Bike Cross-Country Champion | Ro

one¹

CODA CD-F Front Disk Brake Hub

- Milled by digitally controlled high-precision CNC machines • 140 g • 6061-T6 aluminum shell
- 19 mm oversized axle provides exceptional strength and control with all types of forks
- Canted flanges reduce spoke head stress
- Double-sealed cartridge bearings • Designed for use with CODA disc brakes

two²

CODA CD-R Rear Disk Brake Hub

- Milled by digitally controlled high-precision CNC machines • 340g • 6061-T6 aluminum shell
- Four cartridge sealed bearings for smooth rolling and low maintenance • Shell flanges are canted at 4.5 and 8.5 degrees for reduced spoke head stress • Indestructible Hugi Star Ratchet system for efficient power transmission and minimized energy loss, 32 interlocking drive teeth with a ring seal between the cassette and hub (conventional hubs use only two or four spring and pawl ratchets) • Designed for use with CODA disc brakes

three³

CODA Rear Cassette Hub

- CNC-machined in the U.S. from 6061-T6 aluminum • 300 g • Indestructible Hugi Star Ratchet system for efficient power transmission and minimized energy loss, 32 interlocking drive teeth with a ring seal between the cassette and hub (conventional hubs use only two or four spring and pawl ratchets) • Canted shell flanges at 4.5 and 8.5 degrees reduce spoke head stress
- Sealed cartridge bearings • Choice of 130, 135 and 140 mm spacing • Available in 28, 32, 36 and 40 hole configurations • 140 mm hubs available threaded for drum brake application

4 four

CODA 901M Front Hub

- 115 g • Double-sealed cartridge bearings • Integral labyrinth bearing shield • Precision CNC-machined from 6061-T6 aluminum • 19 mm oversized axle • Canted flanges to reduce spoke stress • 32 or 36 hole • Fully serviceable

five 5

CODA 900M Front Hub

- 99 g • Sealed cartridge bearings • Precision CNC-machined from 6061-T6 aluminum • Anodized finish • Available in 28, 32 and 36 hole configurations

6 six

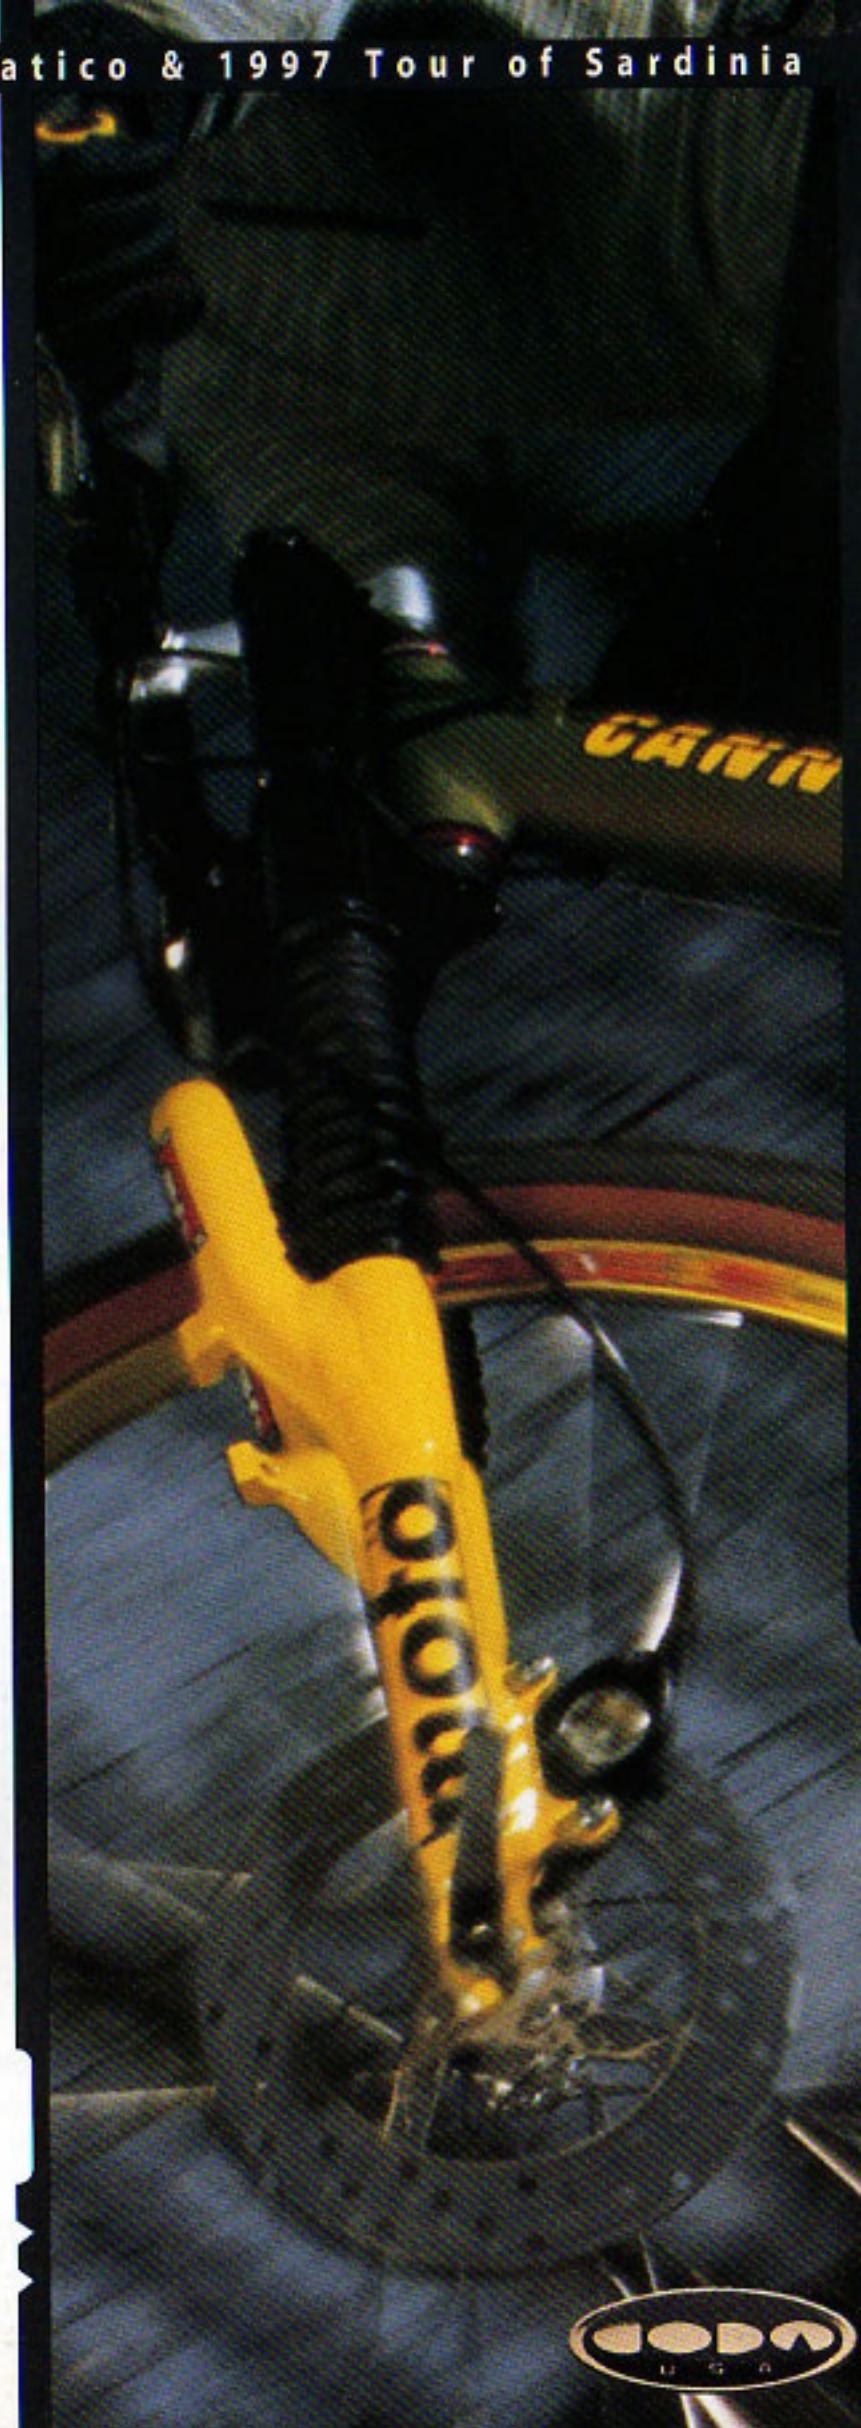

CODA Front & Rear QR Skewers

- Front: 53 g • Rear: 57 g • "Positive Click" release and closing indicator • Steel contacts • Available for 130 mm or 135 mm rear dropouts

seven 7

CODA CD (Compact Disc) Brakes

- Provides exceptionally consistent, maintenance-free braking in all riding conditions • Sturdy one-piece CNC'd caliper increases braking power while reducing brake flex • Master cylinder houses two concentric fluid reservoirs that deliver consistent stroke and easily adjustable volume for even pad wear • Effortless adjustment via thumb-screw • Inside the caliper, two opposing pistons with spring-loaded retraction and internal magnetic pad retraction ensure consistent braking, without parasitic pad drag • Stiff metal-matrix rotor retains shape and resists wear under high-heat braking • Internal pad retention/wear indicator • Easy pad replacement • Forged, three-finger lever with adjustable reach • Master cylinder, caliper, tubing weight: 280 g

- 32 hole CODA 900 cassette rear hub • Indestructible Hugi Star Ratchet with 32 interlocking drive teeth, canted shell flanges and cartridge sealed bearing • Mavic Rims • DT Swiss "Revolution" double-butted spokes • 14/17 gauge non-drive side with 14/15 gauge double-butted spokes on drive side • Alloy nipples

3.

A

favorite of Libor Karas and Martyn Ashton of the Volvo/Cannondale Team, the "Beast of the East" is perfect for technical and trials-style riding. The Beast features an elevated bottom bracket shell for extra clearance over rocks and logs, and a sloping top tube for extra stand-over room when straddling the bike in uneven terrain. For light weight, the all-aluminum frame has a butted down tube, butted seat tube, and wishbone seatstays.

Handmade in Bedford, Pennsylvania.

Iris Blue (IRS)

BEAST OF THE EAST 900

Beast of the East CAAD2 frame, with 13" bottom bracket clearance

TIG-welded, 1 1/8" chrome-moly fork

CODA CF2 cold-forged crank

Shimano XT/STX-RC with Avid Direct Pull brakes

LX hubs with Mavic 221 rims

The Beast of the East 900 is the ultimate bike for tight, technical terrain. Its 13" bottom bracket height delivers great clearance, and its laid back seat angle makes it easy to pop the front wheel up and over oncoming obstacles.

Our non-suspended mountain bikes come with one of two frames. The CAAD2 frame, found on the M900, M700, M500, and M400, features internally-butted seat, down and top tubes that have a thicker wall in areas critical to strength, and a weight saving thinner wall throughout the rest of their lengths. As light as the best metal matrix frames, the CAAD2 also has our patented (#5,020,819) replaceable derailleur hanger.

The CAAD1 frame weighs less than even the lightest chrome-moly frames, and is constructed with the same patented (#5,249,818) techniques used to craft our Super V, CAAD3 and CAAD2 aluminum frames. Like these other frames, the CAAD1 is also handmade in the U.S. with lightweight, flex-resistant aluminum tubing that provides an explosive power transfer of pedaling energy to the rear wheel.

CODA CF2 cold-forged crank

Shimano XT/STX-RC with Avid Direct Pull brakes

LX hubs with Mavic 221 rims

Storm Blue Fade (BLU),
Polar Silver (SLV)

New for 1998, the CODA 500 pedal weighs in at just 372 grams. The easily-adjustable pedal offers an optical spring tension display, four degrees of float, and a unique rear clamp that provides easy cleat entry. The pedal also features an aluminum body with an attractive gray finish, a durable chrome-moly axle, and a lip seal to keep the bearings free of contamination and spinning smoothly.

The M700 is a smart pick for those who may want to upgrade to a suspension fork later. With its head tube sized for a 1 1/8" steerer, the M700 is compatible with a variety of aftermarket suspension forks (including the HeadShok Moto DH and Moto FR).

The International Mountain Bicycling Association (IMBA) has established the following guidelines for proper trail etiquette:

IMBA Rules of the Trail

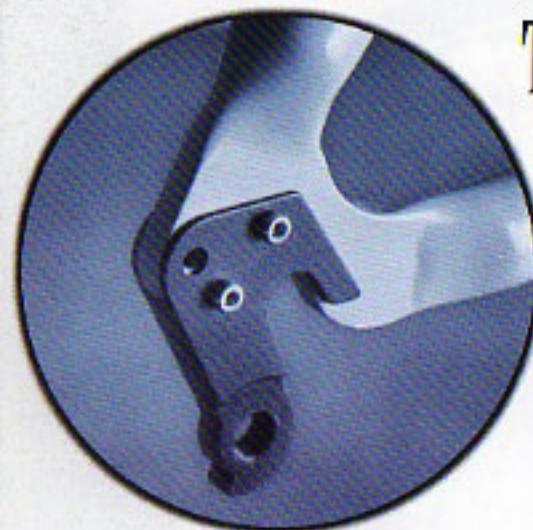

1. Ride on open trails only.
2. Leave no trace.
3. Control your bicycle.
4. Always yield trail.
5. Never spook animals.
6. Plan ahead.

Remember, you're an ambassador for our sport every time you ride. Represent mountain biking properly by following the guidelines above. And if you're not already a member of IMBA, join today. (As a founding member, we practice what we preach.) For more information, contact IMBA at PO Box 7578, Boulder, CO 80306.

RIGID MOUNTAIN

Our

CAAD3 Cyclocross frame is built around an innovative Power-Pyramid downtube, which gradually flares in diameter and tapers in wall thickness as it nears the bottom bracket shell. This unique configuration delivers the flex-resistance of an oversized tube (and the light weight of a thin-walled tube) at the bottom bracket, and the strength of a thicker wall at the head tube. The CAAD3 Cyclocross frame also features weight-saving butted top and seat tubes, wishbone seat stays for generous clearance of mud-caked tires, our patented (#5,020,819) replaceable rear derailleur hanger, and cantilever brake bosses. And for comfortable portaging, we've moved the top tube cable guides to the right side of the tube (where they're less likely to gouge your neck).

We offer two models with the CAAD3 Cyclocross frame; the XR800, with a lightweight aluminum fork, and the XS800, which features a HeadShok Fatty X suspension fork. The HeadShok Fatty X has 25 mm of hydraulically-damped travel, a combination MCU/coil spring element, and an easily adjustable preload. We've also outfitted the Fatty X fork with a low crown to maximize top tube stand-over clearance, and a two-position Damping Dial that can be activated "on-the-fly" to switch from super-plush response to totally locked-out for full-bore, flat-out sprints.

XR800

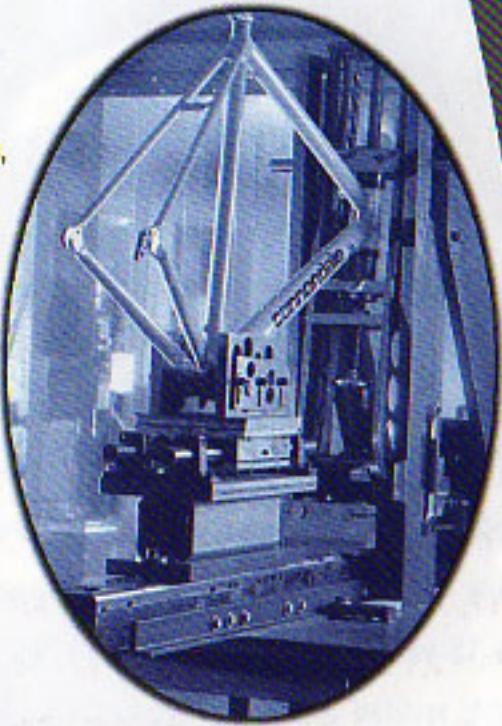

Rigid CAAD3 Cyclocross frame

Aluminum Cyclocross fork

Shimano 105 components

RX100 hubs with Mavic
CXP21 rims

Like all our frames, the XR800's frame was designed on sophisticated CAD (computer-aided design) computers and torture-tested for strength and endurance in the Q-Lab at our Bedford, Pennsylvania, factory.

The Fatty X's telescoping steerer lets us use rigid fork blades that deliver precise tracking and steering control that no fork with telescoping blades can equal. The fork's swaged alloy blades meet in a slim, low-profile crown that helps maximize stand-over clearance. The Fatty X fork also has a combination coil/MCU spring, 25 mm of hydraulically-damped travel, and an on/off Damping Dial that locks-out the fork for sprints and climbs.

Our

new line of S.S.T.
(Seated-Sports Technology)
sport chairs have their roots in
Cannondale Founder and President
Joe Montgomery's frustration with
wheelchairs he'd purchased for his ten
year-old son, Michael, who has cerebral
palsy. The chairs, Joe found, were invariably
heavy, over-priced, and prone to breaking.
With 15-years of experience producing light-
weight, welded aluminum frames for wheeled
vehicles, Joe realized that Cannondale could
bring dramatic improvements to sport wheel-
chairs' archaic technology.

The fruit of that realization, S.S.T. models for daily
use, off-road use, tennis, basketball, and road
racing will debut this year. (Prototypes of the
road racing model have already captured
numerous marathon and 10k wins.) All the
S.S.T. models will be manufactured at our
plant in Bedford, Pennsylvania, and available
for distribution through our network of
bicycle retailers.

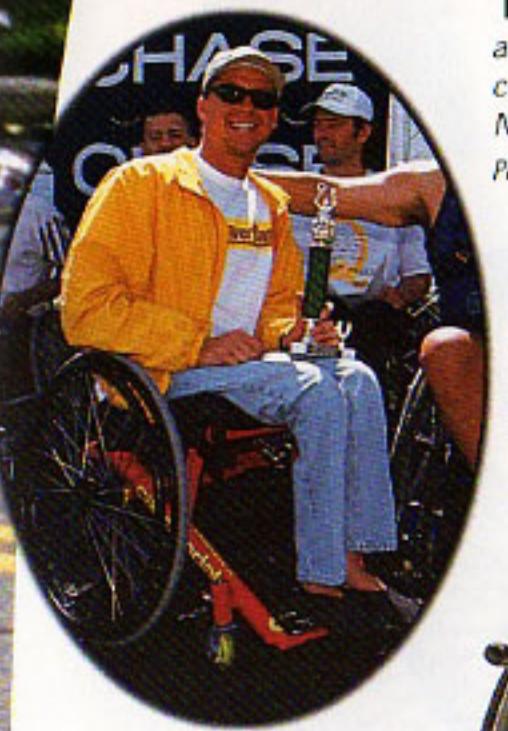

For more information on S.S.T.
chairs, contact us at 1 800 BIKE
USA, or visit our web site at
www.cannondale.com.

Cannondale

Team S.S.T. dominated races across North America last summer, and is composed of Jim Knaub, Paul Wiggins, Eric Neitzel, Mustapha Badid and Jun Hiromichi.

Sun AT-18 rims

O

ur Silk Path bikes combine our lightweight CAAD2 aluminum hybrid frame with one of two patented, shock-absorbing HeadShok Silk Path suspension forks. The result: "The Mercedes® of hybrids" according to Consumers Digest magazine; the plunkest, most comfortable hybrid-style bicycles available anywhere. The American-made CAAD2 frame is constructed of lightweight, butted aluminum tubing that concentrates aluminum in high-stress areas, and shaves material — and weight — away from non-essential locations. The CAAD2 frame's geometry, along with the components spec'd on each model, emphasize performance, comfort, and ease of use.

Critical to the Silk Path's performance and comfort are the HeadShok Silk Path forks. The Silk Path M fork (standard equipment on the Silk Path 500 and Silk Path 300) has 25 mm of comfort-enhancing travel and a combination coil/MCU (micro-cellular urethane) spring.

The Silk Path D fork, featured on the Silk Path 900 and Silk Path 700, also has a combination coil/MCU spring and 25 mm of travel, with the added performance of oil damping and a two-position Damping Dial for "on-the-fly" lockout.

Spruce Green (SPR),
Really Blue (BLU)

Our Silk Path M fork enhances both comfort and control by absorbing shock and road vibration. The Silk Path M has our patented telescoping steerer tube design, 25 mm of travel, and an easily adjustable preload setting that customizes the fork to the rider's weight.

The Silk Path 700's shock-absorbing CODA 900S suspension seatpost takes the sting out of bumps with 1 3/4" of travel cushioned by an MCU (micro-cellular urethane) spring. Also featured on the Silk Path 900.

Shimano STX/Alivio with side pull cantilever brakes

RM40 hubs with Sun AT-18 rims

Perfect for around-town cruising, our hybrid models are equally suited to fast paced cross-training, and fun, low impact aerobic workouts. Each hybrid features a low center of gravity for stable, confidence-inspiring handling, a comfortable, upright riding position, and convenient handlebar-mounted shifters for steady control when changing gears. A versatile drivetrain (either 21 or 24 speeds, depending on model) gets you up to speed efficiently, and is perfectly complemented by sure-stopping side pull cantilever brakes.

Our hybrid models feature one of three lightweight aluminum frames. The H700 and H500 both boast our CAAD2 hybrid frame, which uses lightweight butted tubing (the tube walls are thicker at the ends for maximum strength in crucial areas, and thinner elsewhere to minimize weight). The H300's CAAD1 frame features TIG-welded straight-gauge aluminum tubing, while the H300 Mixte incorporates similar tubing in a classic "step through" geometry. All three frames are handmade in our Pennsylvania factory in a patented (#5,249,818) process, and come fully detailed with threaded mounts for waterbottle cages and eyelets for front and rear carrier racks.

Take

your bike to school!

Most of us learn to ride at an early age, but truly mastering skills for successful off-road biking is more like learning to ski: Instruction can really help. Dirt Camp's premiere, certified instructor/guides open the door for riders of all abilities to improve mountain biking skills and increase enjoyment of the sport. You'll learn in a small group of riders with similar skills. Seasoned enthusiasts will learn to hone more challenging moves and techniques, while those newer to the sport will jump-start the learning process and advance more quickly than they ever dreamed they could. All this while you enjoy America's most spectacular riding destinations or the all-new Dirt Camp ski resort locations. Great riding, a relaxed setting, first-class food and lodging and the chance to demo high-end bikes and accessories are all part of the Dirt Camp experience.

Dirt Camp brings together the very best that the sport of mountain biking has to offer. Depending on the Camp you choose, you may find yourself ripping up singletrack with Missy Giove and Tinker Juarez of the Volvo/Cannondale racing team, sharing a gourmet lunch with an editor from *Bicycling Magazine*, or listening to a cycling pro recount adventures on the circuit. As diverse as their backgrounds are, our instructors will share with you their deep love and knowledge of mountain biking.

DIRT CAMP™

Dirt Camp Ski Resorts:

Dirt Camp is now available at a select group of premiere ski resorts throughout the summer. Join in a two-hour or half-day Dirt Camp instructional or guided clinic. Take a break with a 2-3 day Weekend Dirt Camp Resorts package. Our resorts offer a variety of activities guaranteed to satisfy all your friends or family: Hiking, golf and tennis are just a few of the options open to those who accompany you on a Dirt Camp Resort trip.

Cannondale Team Camps:

The Volvo/Cannondale professional mountain biking team will be the focal point of a spring mountain bike camp in Palm Springs, California. This team is famous worldwide for its skills and distinctive personalities and will support our instruction and bring an added dimension to your already remarkable off-road riding experience.

Moab Camps:

Moab is our signature Camp. The location is home to some of the finest, most breathtaking riding on the planet. Who hasn't heard of Slickrock? By the end of the six days of Dirt Camp/Moab, you'll also know Porcupine Rim, Flat Pass, and Amasa Back. If you only ride a mountain bike once in your life, ride it in Moab and let us show you the legend. These Camps are described by our guests as "six days in heaven". We have clients who are signing up for their sixth Moab Camp!

Junior Development Dirt Camp:

The Junior Development Camp provides a structured environment that will develop and refine the abilities of younger riders. The Junior Development Dirt Camp isn't just about riding a bike, but about group dynamics in a multi-day adventure setting, and the larger lessons that can be learned through facing challenges and mastering new skills.

Contact us for a complete 1998
Dirt Camp schedule and brochure.

DIRT CAMP

Our

Silk Road models pair our muscular CAAD3 road frame* with our HeadShok Silk Road suspension fork. The CAAD3 is constructed of lightweight, butted 6061-T6 aluminum, and has our unique PowerPyramid downtube (see page 21) and patented (#5,020,819) replaceable rear derailleur hanger. But it's the HeadShok suspension fork that really sets our Silk Road models apart. Besides increasing comfort, the Silk Road fork helps you go faster by hugging the pavement through corners, and by absorbing the thousands of small and medium impacts that otherwise soak up forward momentum. The Silk Road features 15 mm of travel, hydraulic damping, and a combination coil/MCU (micro-cellular urethane) spring that is customized with an allen wrench to the weight of the rider. A stem-mounted Damping Dial deactivates the Silk Road with a quick twist for efficient, "bob-free" sprints and climbs.

* The SR500T is equipped with a CAAD2 frame.

SILK ROAD
1000

CAAD3 Road Racing frame: "Light as titanium," Handmade in USA

HeadShok Silk Road fork: 15 mm of travel with on-the-fly lockout

Shimano 9-speed Ultegra drivetrain

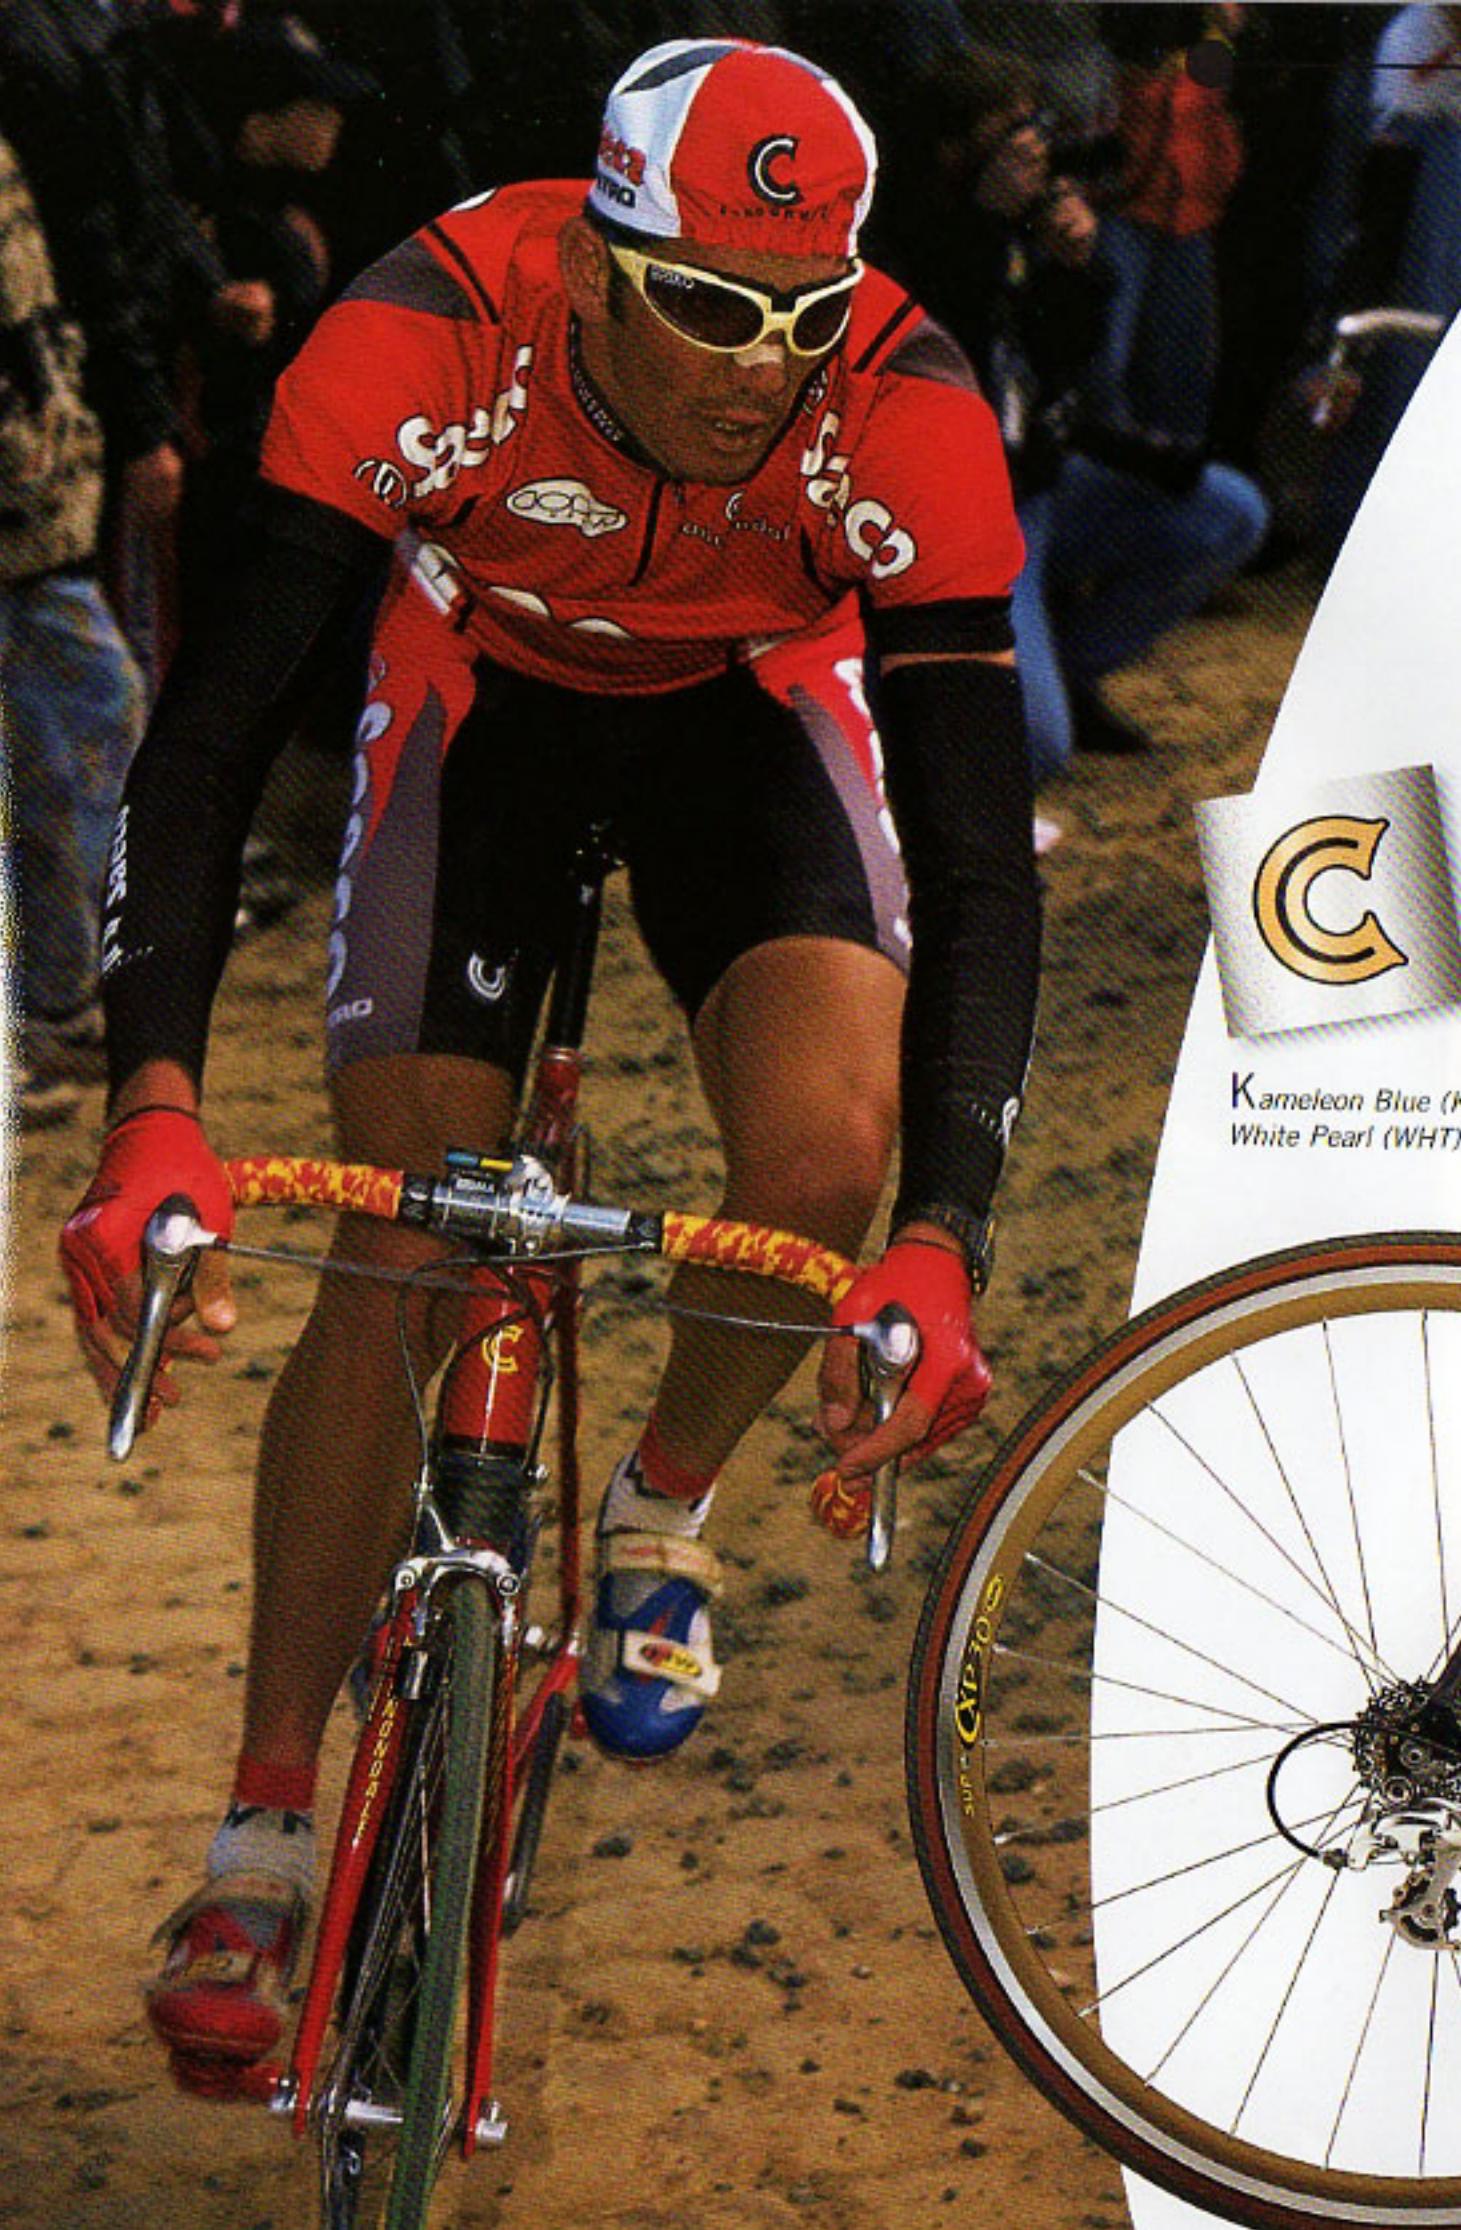

Ultegra hubs with Mavic CXP30 rims

HeadShok Silk Road fork: 15 mm
of travel with on-the-fly lockout

Shimano RSX triple with
RX100 crankset 30/42/52

RSX hubs with Mavic
CXP21 rims

For efficient "bob-free" climbing and sprinting, the HeadShok Silk Road fork can be locked-out with a quick twist of its stem-mounted Damping Dial.

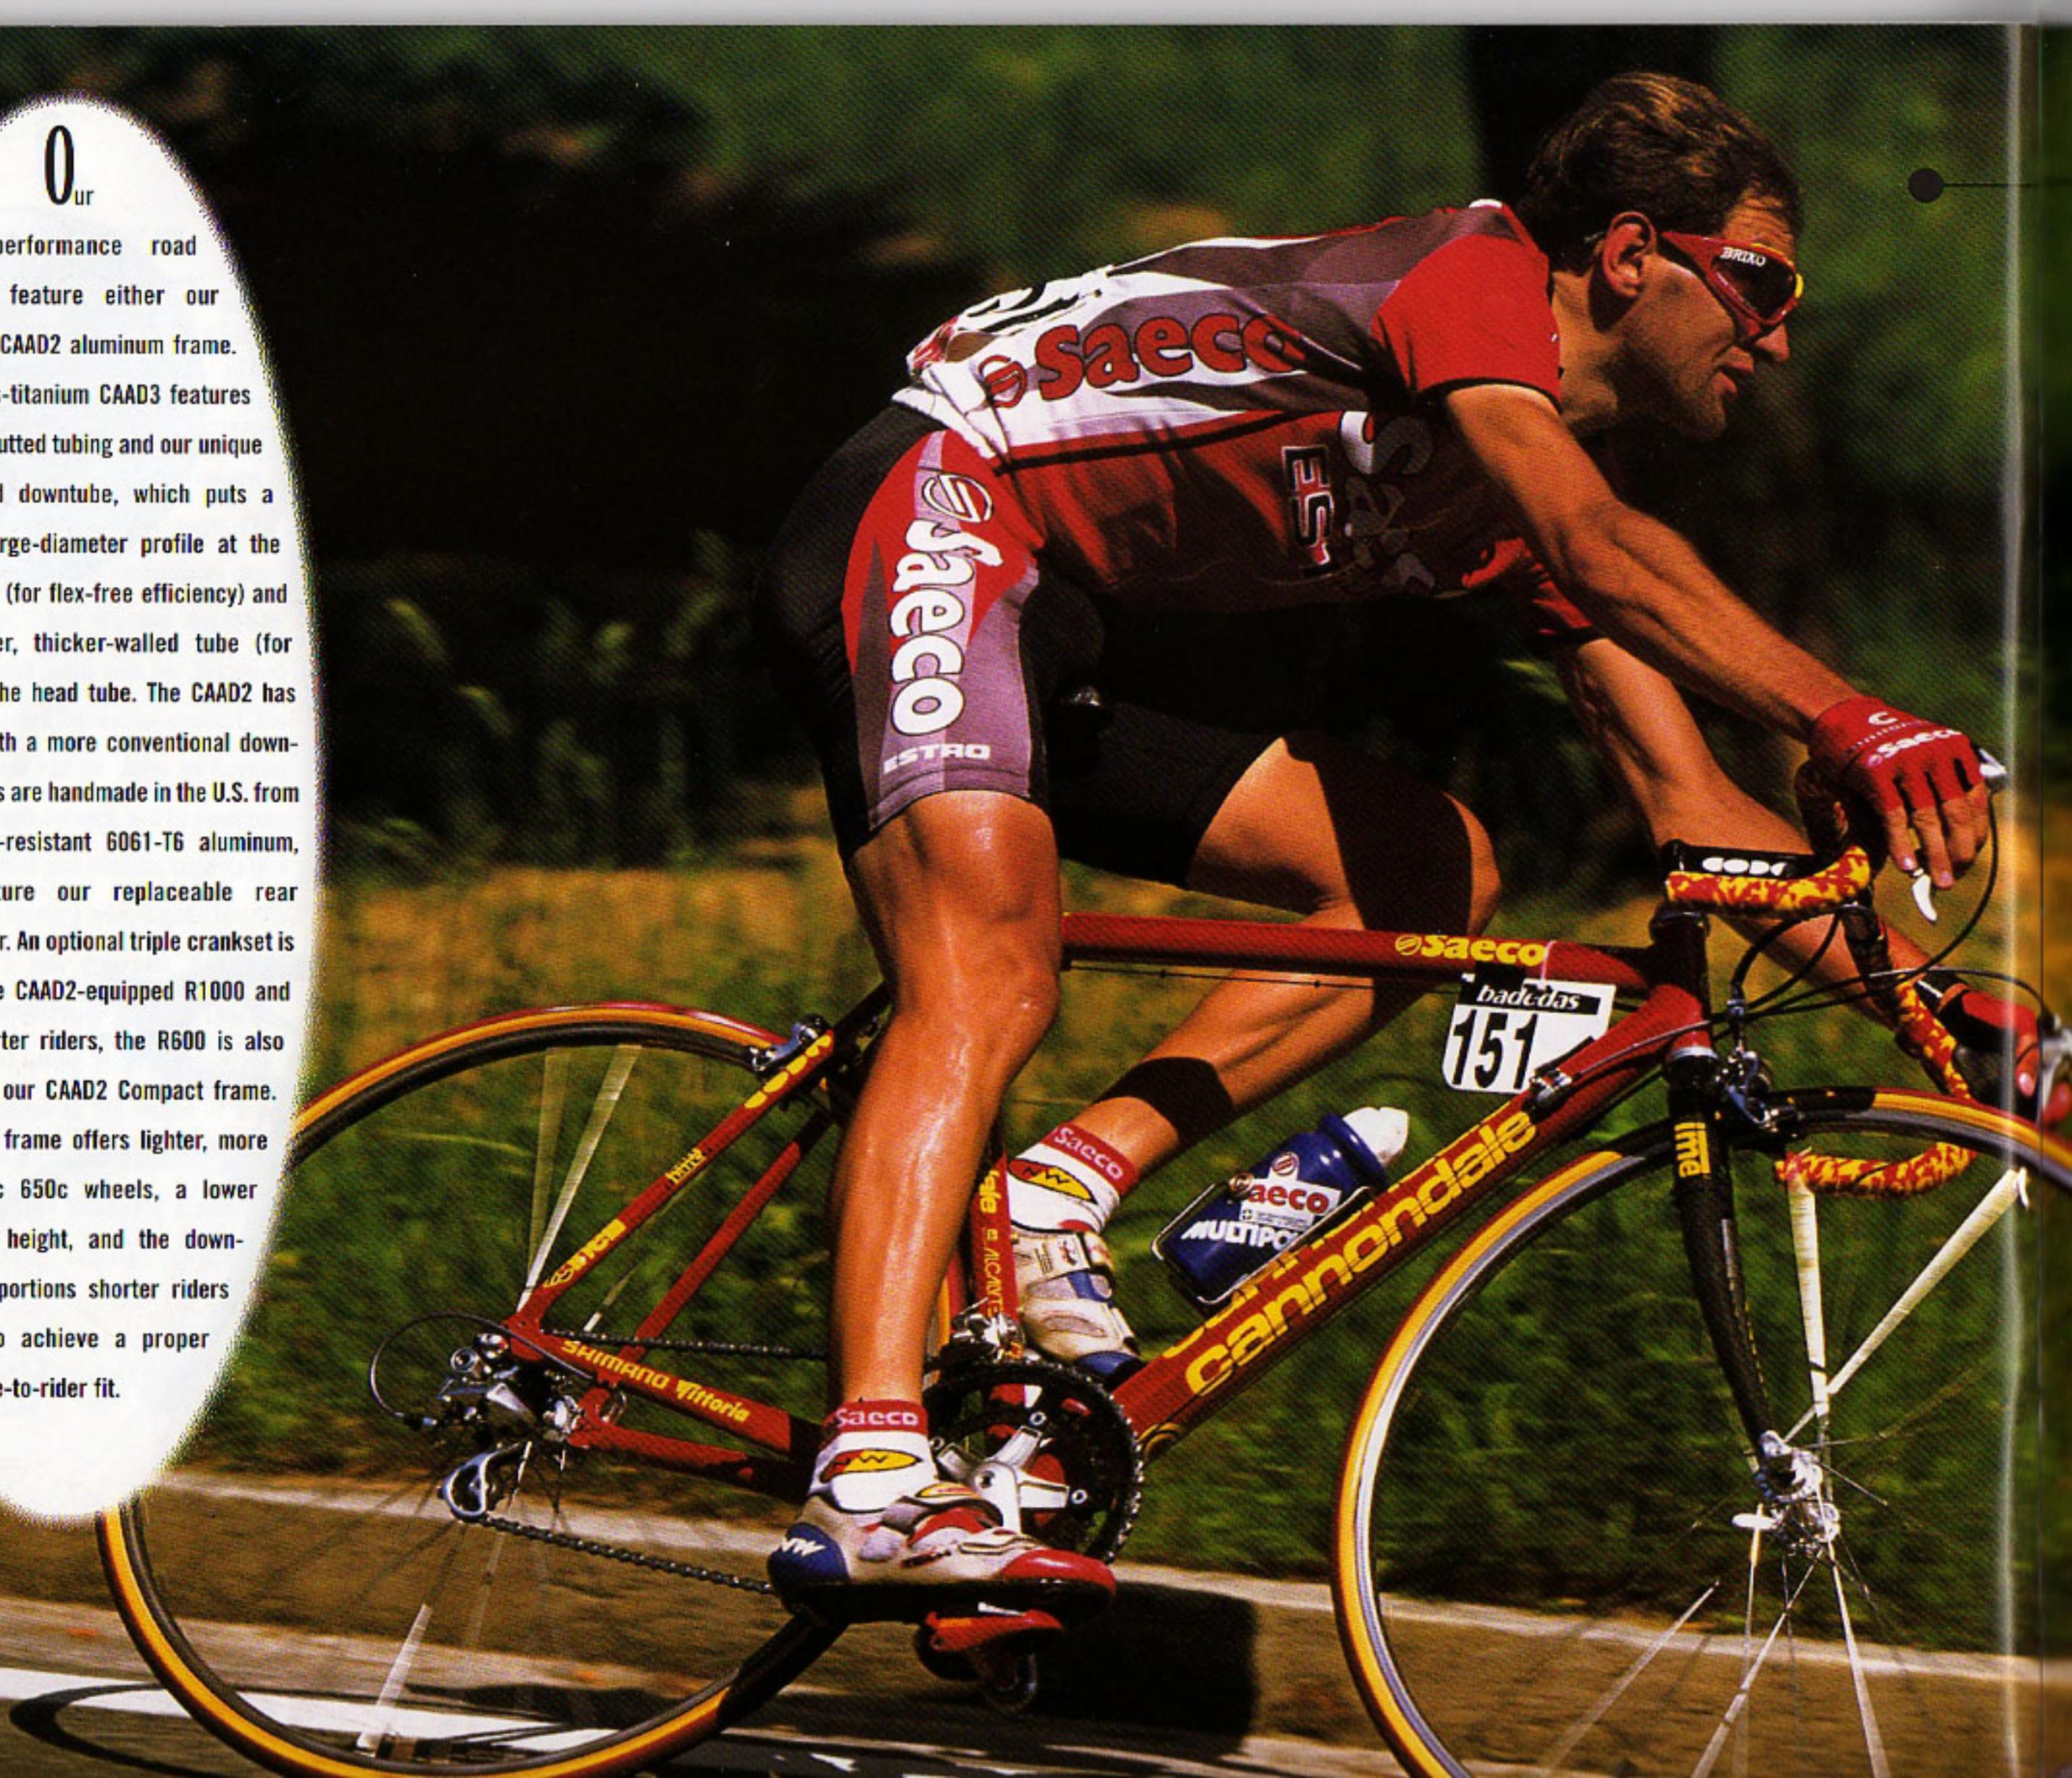

SILK ROAD

Our

high-performance road models feature either our CAAD3 or CAAD2 aluminum frame. The light-as-titanium CAAD3 features lightweight butted tubing and our unique PowerPyramid downtube, which puts a thin-walled, large-diameter profile at the bottom bracket (for flex-free efficiency) and a more slender, thicker-walled tube (for strength) near the head tube. The CAAD2 has butted tubing with a more conventional down-tube. Both frames are handmade in the U.S. from lightweight, flex-resistant 6061-T6 aluminum, and both feature our replaceable rear derailleur hanger. An optional triple crankset is available on the CAAD2-equipped R1000 and R500. For shorter riders, the R600 is also available with our CAAD2 Compact frame.

The Compact frame offers lighter, more aerodynamic 650c wheels, a lower stand-over height, and the down-sized proportions shorter riders need to achieve a proper frame-to-rider fit.

Saeco/Cannondale

Ivan Gotti of the Saeco/Cannondale Team, en route to his stunning win of 1997's 22-stage, 3,892 kilometer Giro d'Italia. Teammate Mario Cipollini won the race's final stage, setting a new personal record of five stage wins in a single Giro.

Photo ©Graham Watson

Our Slice fork's lightweight, carbon fiber blades closely parallel the spokes to channel oncoming air to the blades' outboard surface, away from the turbulence created by the forward-rotating spokes. The upper lengths of the blades form a unique, keyhole shape that prevents the air dragged forward by the tire from building up behind the crown, allowing the wheel to slip more easily between the fork blades for greater aerodynamic efficiency.

ROAD

We produce a total of three Multisport models. For those who prefer a more traditional road geometry with 700c wheels, we offer our Multisport 4000. ITU World Champion Simon Lessing's weapon of choice, the 4000 has our lightweight CAAD3 road frame and the improved handling and vibration-damping comfort provided by its HeadShok Silk Road suspension fork.

The 1000 and 600 are built around our full-blown Multisport frame. Developed with help from Scott Tinley, the frame features a multi-sport-specific geometry and aerodynamic 650c wheels. For confident handling with aero bars, the lightweight Multisport frame is designed with a 72 degree head angle. A 75 degree seat angle provides an ergonomic "saddle-forward" riding position, and short, 38 cm chainstays are less subject to flex for more efficient power transfer to the rear wheel.

Simon

Lessing, ITU World Champion, can ride any bike he wants. His weapon of choice? Our Multisport 4000 with a HeadShok Silk Road suspension fork. The HeadShok fork's 15 mm of hydraulically-damped travel helps Simon go faster by absorbing the thousands of small impacts that would otherwise rob him of forward momentum. And to prevent wasteful bobbing on sprints and climbs, Simon simply deactivates the suspension with a quick twist of the fork's Damping Dial.

Photo ©Robert Oliver/Inside Triathlon

In his first race aboard a HeadShok-equipped Cannondale, ITU Champion Simon Lessing cruised to an impressive victory at the Pucan International Triathlon in Pucan, Chile. Winner of Competitor Magazine's "Triathlete of the Year" award, Lessing is a four-time World Champion and three-time European Champion.

You'll never dominate your local race unless you're properly hydrated. (Use a waterbottle or hydration bag!) Even with the lightest, fastest bike in the world, you won't perform to your potential if you have saddle sores. (Wear cycling shorts!) And the most supple full-suspension bike ever created rides horribly with a flat tire. (Pack a pump and spare tube!) The point here is that the right cycling apparel and accessories aren't optional, they're necessities if you hope to get the most performance and enjoyment out of every ride.

We've been designing and manufacturing innovative accessories for cyclists since 1971. Our offerings now include full lines of men's and women's apparel, cycling shoes and socks, pumps, hydration bags, seat bags, waterbottles, and a whole lot more. New gear for 1998 includes a fresh assortment of women's garments, an expanded collection of C-Style apparel, and a total of five C-Soles shoe designs. Every item has been engineered with the specific demands of cyclists in mind, and each reflects our almost three decades of experience satisfying the needs of discriminating riders.

The following pages highlight selected apparel and accessories. For a closer look, be sure to visit your local authorized Cannondale apparel and accessories dealer. (To track down your nearest authorized Cannondale dealer, call us toll-free at 1 800 BIKE USA.)

Nowhere are the benefits of large-diameter aluminum tubing showcased more dramatically than in our tandem frames. Conventional chrome-moly tandem frames are notorious for being heavy and inefficient, courtesy of the extra long tubes used in their construction. Our aluminum frames also use long tubes — some with incredibly large diameters — but aluminum's low density still results in frames up to 25% lighter than their chrome-moly counterparts. Those massive tube diameters, meanwhile, add the flex-resistance needed for efficient power transfer to the rear wheel. We make our tandem frames in two styles. Our two 26-inch wheel models have the versatility to handle both on-road and off-road duties with equal aplomb, while our 700c-equipped RT3000 and RT1000 are perfectly suited for everything from fast-paced sport riding to loaded touring.

MT3000

Mountain Tandem frame

HeadShok Moto FR fork: 100 mm
of travel with damping adjustmentShimano XT/Sachs Quarz components
with Magura hydraulic brakesCODA 900 hubs with
Sun Rhyno Lite rims

Our 26" wheel tandems are versatile animals, great on the road and off, with plenty of clearance for wide, mud-caked knobs tires.

The MT3000 comes with our new HeadShok Moto FR suspension fork, which features 100 mm of travel, a beefy triple-clamp design, and easy-rolling, needle bearings that virtually eliminate stiction.

Our patented (#4,808,147) wedge-anchored eccentric allows quick, easy adjustment of the timing chain without requiring a strength-reducing slot in the bottom bracket shell.

Cycling comfort and performance are dependent on the proper bike-to-rider fit. That's why we spec each of our tandems with a CODA adjustable stoker stem, which telescopes from 120 mm to 170 mm to provide stokers with a totally dialed fit.

Our CAAD2 touring models take a classic touring geometry and update it with the unbeatable efficiency of laser-cut, large diameter aluminum tubes (and even an optional HeadShok suspension fork on the T700). The geometry features a long wheelbase, low center of gravity and relaxed steering for steady, stable handling and all-day comfort in the saddle. The large diameter aluminum tubes are both lightweight and adamantly flex-resistant: Even when the bike is loaded with panniers, every ounce of pedaling energy goes into driving you forward and not into flexing the frame. The CAAD2 frame is handmade in the U.S., and features the helpful extras that distinguish a true long-distance machine, from a trio of bottle cage mounts to threaded eyelets for front and rear racks.

We've spec'd the T1000 with muscular Magura hydraulic brakes. Powerful brakes are important on touring bikes, where the extra weight of loaded panniers increases momentum and makes stopping more difficult.

The Shimano bar-end shifters on the T1000 allow you to keep both hands firmly on the handlebars when changing gears. (A feature you'll appreciate if you've ever pedaled through a cross-wind with front panniers.)

T700

Our T700 is available in two incarnations: With a conventional chrome-moly fork, or with a shock-absorbing HeadShok Silk Path D fork. The HeadShok-equipped version boasts 25 mm of hydraulically-damped travel, a combination coil/MCU spring, and an on/off Damping Dial that deactivates the suspension to prevent bobbing on long climbs.

For the past 16 years, Cannondale has been a proud and enthusiastic sponsor of the Multiple Sclerosis Society's "Down To The Sound" bike tour. Our involvement (we donate bicycles and other prizes to participants who collect per-mile pledges) has helped our local MS Society chapter raise more than \$1.5 million dollars over the years.

S peed Is Our Friend™

"Speed Is Our Friend" has become the unofficial motto of Cannondale. On one level, these four simple words reflect our support of some of the world's top professional cyclists and wheelchair racers. On a more fundamental level, they convey our commitment to a lightning-fast product development process that, with amazing speed, turns the combined insights of our sponsored riders and R&D staff into technologically superior products. Underlying it all, "Speed Is Our Friend" speaks of our dedication to producing the fastest bicycles and sport wheelchairs in the world.

If "Speed Is Our Friend" reflects our strategy, the manner in which we pursue this strategy is best described in our philosophy:

The Cannondale Philosophy

Our passion is to be the best cycling company in the world. We will succeed because:

1. We care about our customers, suppliers and each other.
2. We design and deliver a stream of innovative products.
3. We continuously improve.
4. We concentrate on detail.
5. We limit our distribution to the best bicycle retailers in the world.
6. We govern our every deed by what is just and right.

Thank you,

Joseph S. Montgomery
Founder & President
