

1998

THIS IS NORCO

The 1998 Line of Norco bicycles reflects our commitment to quality, value, and above all performance.

We are fortunate to be based in an area surrounded by some of Canada's best mountain bike terrain. Our pro riders and R&D staff are dedicated to testing and refining our designs to maximize the performance of every model we build.

We have provided you with a brief description of our bicycle categories, and identified each with an icon. Please review each category as they are designed to help you identify the models that best fit your needs.

Full Suspension series

Competition series

Performance series

Adventure series

Expedition Elite series

Expedition series

From World Cup racing to "free riding" your favourite single track, the VPS Series of full suspension bikes deliver state of the art technology. They offer Variable Point Suspension (VPS), to customize geometry and rear wheel travel to meet your individual needs.

Westcoast inspired hardtail designs that excel in technical single track as well as fast fire roads. They remain true to our philosophy of function above fashion and focus on exceptional quality lightweight frame materials and components.

A comprehensive series of bikes for those who appreciate premium frames and components. A wide selection of aluminium, chromoly and full suspension models to choose from.

NORCO Adventure Series bikes deliver superior control, easy handling and reliability. When fun and freedom are your primary objective, Norco is your adventure cycle.

When undertaking a challenging journey or simply looking for a superior bike, you'll want to choose a Norco Expedition Elite. We offer two distinct styles with either an aerodynamic drop bar position or a comfortable upright bar setup.

It's easy to see why Norco Expedition Series models continue to be the wise choice for cyclists who want comfort, style and dependability. Their multi purpose ride is ideal for weekend excursions or urban commuting.

- Super-tough 6061 T-6 monocoque swing link full suspension frame, with 4" to 5.5" adjustable rear wheel travel.
- Active rear pivot performs consistently while pedaling, braking or coasting.
- Super-plush Rock Shox Coupe Deluxe shock with adjustable preload and rebound damping.
- Marzocchi JR. T triple clamp forks resist lateral flex and feature 110mm of bump travel.
- Gripshift ESP 9.0 SL shifters and rear derailleur designed for improved ergonomics, and a 1:1 actuation ratio for ultra responsive shifting.
- Formula front disc brake, with an external reservoir to reduce heat build up and brake fade.
- Race Face LP forged cranks for ultimate strength and stiffness.
- Super-tough Sun Rhino Light rims and Panaracer 26x2.1 Duster tires.
- Axiom Gravity riser bar and CNC shorty stem.

- Reynolds 853, air-hardened, heat-treated steel, main triangle with ultra light Fuji Stoutlight AFS stays and super tough investment cast dropouts.
- Marzocchi Bomber Z-2 BAM, with 75mm of travel and disc mounts.
- Gripshift ESP 9.0 SL shifters and rear derailleur, re-designed for easier cable changes, and a 1:1 actuation ratio for ultra responsive shifting.
- Formula front disc brake, with an external reservoir to reduce heat build up and brake fade.
- Race Face LP forged cranks for ultimate strength and stiffness.
- Axiom Anti Gravity handlebar, stem and seatpost,
- Shimano 747 SPD pedals.
- Panaracer Duster BFC tires, and Sun 0 Degree rims with ABT sides for unparalleled braking.

Torrent

- Ultralight Easton "Elite" Taperwall tubing and AFS rear stays.
- Marzocchi Bomber Z-2 Atom Bomb suspension fork with 75mm travel, single adjustable hydraulic damper and external preload adjusters for easy trailside tuning.
- Race Face forged cranks with CNC chainrings for super-fast front shifts and quick power transfer.
- New Shimano XTR rear derailleur with roller guide and reverse spring tension, and Rapid Fire XTR shifters for flawless shifting performance.
- Shimano 535 SPD pedals, and powerful Shimano Deore XT V-brakes and levers.
- Sun 0 Degree rims with ABT sides, Shimano Deore XT hubs, DT Swiss butted spokes, and Panaracer Duster kevlar tires.

Rampage

A new ride for 1998. Feel the difference you get with steel!

- Reynolds ultra light 631 air-hardened steel main triangle with butted stays and cold forged dropouts.
- Reduced stiction and 75mm of bump-bashing travel with the new Marzocchi Z-3 BAM light forks, super light Easton steertube, new CNC brace, and ultra stiff BAM alloy crown.
- Responsive Shimano Deore XT Rapid Fire Plus shifters, Shimano Deore LX 4 arm cranks, and a super-stiff profile for efficient power transfer.
- Ultra responsive stopping power with Shimano Deore XT V-brakes and LX levers.
- Durable lightweight wheels with Shimano LX hubs, Sun 0 Degree rims, DT double butted spokes and Panaracer Duster kevlar tires.
- Shimano 535 SPD pedals, and Axiom Anti Gravity handlebar, stem and seatpost.

- VPS (Variable Point Suspension) interrupted / active suspension design. Travel and geometry is adjustable from 2.8 -3.2" of rear wheel travel.
- Super oversize 50mm bi-oval downtube and 38mm toptube, durable and strong.
- Rock Shox Judy T2 suspension fork. Plush coil spring and MCU system provide 63mm of travel.
- Durable pivot hardware and "off the shelf" pivot bushings for easy maintenance.
- Shimano Deore LX V-brakes with MC-40 levers for on-demand stopping power.
- 24-speed drive train with Shimano Deore LX Rapid Fire shifters, Deore XT rear deroilleur and new Shimano STX RC 4 arm cranks.
- Tough, lightweight Sun CR-18 double-wall rims with ABT sides.
- Axiom riser bar, stem and seatpost.

- The VPS-3 shares the same high performance frame as the VPS-2.
- VPS (Variable Point Suspension) interrupted / active suspension design. Travel and geometry is adjustable from 2 3/4 - 3 1/4" of rear wheel travel. Super oversize 50mm bi-oval downtube, and 38mm toptube produce a tough front end for free-riding and cross country performance.
- Rock Shox Indy C front suspension fork with adjustable preload and 63mm of travel.
- Rock Shox Strut Deluxe shock provides plush rear wheel travel and features adjustable spring preload for easy trail side tuning.
- Crisp shifting with Gripshift SRT 6.0 24-speed shifters, Shimano Deore LX rear derailleur and STX compact drive cranks.
- Powerful Shimano STX-RC V-brakes.
- Axiom riser bar, stem and seatpost.
- The performance wheel set includes Shimano STX RC hubs, Sun CR-18 double wall rims, stainless spokes and ground-hugging Panaracer Duster tires.

- Easton Reaction aluminum tube set with "AFS" seatstays to reduce frame flex during braking. Complete with a replaceable rear derailleur hanger.
- Shimano Deore XT rear derailleur with "LX" Rapid Fire plus levers for effortless shifts.
- New Shimano STX-RC 4 arm cranks provide quick, smooth chainring shifts and a stiff new profile.
- Shimano fully adjustable BL-MC 40 brake levers with "LX" V-brakes for powerful braking response.
- Light and strong Axiom handlebar, stem and seatpost.
- Comfortable and light weight Selle Italia Nitrox PD saddle.
- Sun CR-18 double wall rims, DT Swiss stainless spokes, and Panaracer Duster 26x 1.95" tires.

Sasquatch

- New from Reynolds, the 1998 Sasquatch uses 525 double butted chromoly tubing. Reynolds 525 chromoly provides excellent fatigue life and a compliant, comfortable ride. The Sasquatch also features "AFS" seatstays and durable forged dropouts.
- Rock Shox Indy C suspension fork with externally adjustable preload and 63 mm travel.
- Make note of the new Shimano STX-RC Rapid Fire 24-speed shifters with optical gear display and the powerful Deore LX V-brakes.
- The new STX-RC 4 arm cranks shift effortlessly thanks to the patented tooth profiles and ramps.
- Proven reliability and performance from the Shimano Deore XT rear derailleur, STX RC hubs and cartridge bottom bracket.
- Selle Italia Nitrox PD saddle with and Axiom seatpost.
- Super tough Sun CR-18 double wall rims, stainless steel spokes and Panaracer Duster tires complete this off road rocket.

Magnum

- Lightweight aluminum racing frame with a durable double-butted downtube, AFS seat stays and a replaceable rear derailleur hanger.
- Rock Shox Indy suspension fork with 50mm of travel and external preload dials for trailside tuning options.
- 24-speed drive train with Shimano Deore LX rear derailleur, STX compact drive cranks and Rapid Fire shifters.
- Powerful stopping with Shimano STX-RC V-brakes.
- Durable Sun CR-18 double-wall rims, stainless steel spokes and aggressive Panaracer Duster tires.
- Axiom handlebar, stem and seat post with a comfortable, lightweight Selle Italia Nitrox PD saddle.

Voltage

Comfort and control that only a full suspension bike can deliver.

- Active suspension design with 2" of rear wheel travel and durable easy-to-service bushings at the pivots.
- Reliable Dynamount shock with an adjustable spring preload for custom tuning.
- Rock Shox Indy suspension fork with threadless steer tube, 2" of travel and external preload adjusters.
- Shimano STX rear changer, Alivio cranks and Gripshift SRT 4.0 21-speed shifters.
- Stop on a dime with powerful Shimano STX-RC V-brakes.
- Rise bar with an Axiom threadless stem for a comfortable upright riding position.

Bigfoot

Completely redesigned, the 1998 Bigfoot is built to last and perform!

- Rugged yet lightweight with a double-butted chromoly frame, Rock Shox Indy fork with 50mm of travel and external preload adjusters.
- 24-speed Shimano drive train with STX RC derailleurs and Rapid Fire shifters, Alivio Hyperdrive compact drive cranks and cartridge bottom bracket.
- Pure performance with powerful Shimano STX-RC V-brakes and tough Sun double-wall CR-18 rims.
- Oversize chromoly stem with a lightweight aluminum handlebar, and a new performance saddle from Selle Italia.
- Colour: Dark Matte Blue, Red

Berretta

The best value in a Rock Shox equipped mountain bike.

- Chromoly main tubes with dual tapered AFS stays and vertical dropouts for easy wheel installation.
- Rock Shox Indy fork provides 50mm of plush travel, plus easy-to-adjust preload dials for performance tuning.
- 21-speed drive train with Shimano Alivio rear changer, Gripshift shifters, Shimano C-90 compact drive cranks and cassette cogs.
- Ultra powerful Tektro forged V-brakes and levers.
- Tough Alex rims and aggressive tread Kenda Bear Track and Bear Claw tires.
- Comfortable racing saddle with micro-adjust seat post.

A no-nonsense performer on or off road.

- Chromoly main tubes, forks and AFS flex-resisting stays that give Shimano STX RC V-brakes superior stopping power in all weather conditions.
- Crisp shifting with the Shimano STX rear changer, 21-speed STX Rapid Fire levers, Shimano C-90 compact drive cranks and cartridge bottom bracket.
- Durable Alex rims and reliable quick-release hubs with rear cassette.
- Aggressive Bear Track and Bear Claw tires provide flawless traction off road.
- Colour: Matte Army Green, Orange, Gloss Olive

Reactor

The best performance and value in a front suspension mountain bike. A must see!

- RST 281 suspension forks with 2.5" of bump-smoothing travel deliver added control and comfort.
- Lightweight sloping top tube frame, chromoly main tube and flex-fighting AFS seat stays.
- Shimano Acera X rear changer and Gripshift 21-speed shifters.
- Stop on demand with Tektro V-brakes and Levers.
- Durable alloy rims, and quick-release front hub for easy transport.

Bush Pilot

Nothing at this price comes close to matching the value of the 1998 Bushpilot.

- Proven frame design features lightweight chromoly main tubes and forks.
- Powerful new Tektro forged V-brakes provide effortless braking response.
- Fast and easy gear changes with Gripshift 21-speed shifters, Shimano Alivio rear changer and triple cranks.
- Comfortable supersoft foam saddle with an alloy micro-adjust seat post.
- Shimano cartridge bottom bracket for carefree reliability.
- Durable wheel set with alloy quick-release hubs and aggressive tread Kenda tires.
- Colours: (Mens) Ink Blue, Jewel Green, Matte Burgundy (Ladies) Matte Burgundy

Katmandu

Performance at a price you can afford.

- Proven frame geometry with durable lightweight chromoly main tubes.
- Reliable Shimano drive train with an Acera rear derailleur, TY-30 cranks, Hyperglide cogs, and Shimano EZ-fire shifters.
- Quick-release front and rear wheels for easy transport and maintenance.
- Shimano C-90 cantilever brakes for reliable, responsive braking in all weather conditions.
- Comfortable supersoft foam saddle, and lightweight aluminum micro-adjust seat post.
- Colours: Matte Copper, Bright Green

Value-packed mountain bikes for men and ladies.

- Rugged frame design with super oversize tubes, and AFS stays for better braking performance.
- 21 Speed Shimano TY -30 wide range gearing will get you up and down the hills with ease.
- Tektro alloy cantilever brakes deliver powerful braking performance.
- Shimano triple cranks with patented tooth profiles.
- Convenient transport with a quick-release front wheel.
- Colours: (Mens) Yellow, Matte Steel, Chrome Black (Ladies) Matte Teal

A durable 18-speed bike packed with performance features.

- Oversize frame with AFS stays and sloping top tube for added clearance.
- Crisp gear changes with Gripshift shifters and Shimano derailleurs.
- Triple front cranks for gear versatility over a wide variety of terrain.
- Alloy rims and Tektro alloy cantilever brakes provide superior braking response and added safety.
- The 40-degree rise stem ensures a comfortable upright riding position.
- Aggressive tires provide added traction and braking control.
- Colours: Matte Red, Silver/Grey

A premium quality bicycle for commuting, touring or weekend adventures.

- Lightweight aluminum frame, with low rider mounts for a front rack.
- Comfort enhancing flex stem and suspension seat post.
- Easy ascents and no spinouts with the wide ratio Shimano Nexus 24-speed gearing.
- Fast gear changes with the new Nexus push button Rapid Fire shifters.
- Outstanding braking response with Shimano Nexus V-brakes and built-in power modulator.
- Durable alloy wheels with Shimano STX-RC hubs, and a tire tread that reduces rolling resistance without sacrificing traction.

The 1998 Avanti is designed to meet all your performance expedition needs.

- Sturdy and light expedition frame with chromoly main tubes, seat stays and forks.
- 24-speed drive train with ultimate street gearing, Sugino Fuse 500 cranks, Shimano Deore XT rear changer, and quick shifting Gripshift SRT 6.0 shifters.
- Maximum comfort and control with a flex stem and plush spring saddle.
- Safe and effective braking with powerful Shimano M280 V-brakes and built-in power modulator.
- Durable lightweight wheels with Shimano hubs and a new low rolling-resistance tire tread.

Monterey

An expedition frame design with a proven track record.

- Sturdy chromoly main tubes and forks.
- Flawless shifting response with 21-speed Shimano Rapid Fire shift levers and STX rear changer.
- Smooth shifting Shimano C-90 cranks with a reliable cartridge bottom bracket.
- Plush saddle with springs for added shock absorption and comfort.
- Powerful Shimano cantilever brakes.
- Adjustable rise stem for a custom riding position.

A top-quality bike for the cyclist that demands performance and reliability.

- Lightweight chromoly main frame, seat stays and forks.
- Fast and easy shifting with a Shimano Deore LX rear changer and 21-speed Gripshift SRT 4.0 shifters.
- Reliable and efficient Shimano FC 500 cranks with a 48-tooth outer ring and cartridge bottom bracket.
- Maximum comfort and control with the new bump absorbing flex stem and super soft spring saddle.
- Shimano M280 V-brakes with power modulator for confident stops.

Firenza

Arctic

A stylish, lightweight alternative for men and ladies.

- Rugged expedition frame design with a chromoly main tube.
- Shimano 21-speed wide-ratio gearing, Acera rear derailleur and Gripshift 21-speed shifters for easy gear changes.
- High rise bar and stem provide a comfortable upright riding position.
- Superior braking response with alloy cantilever brakes.
- Quick-release front wheel for easy transportation.
- Colour: Ink Blue

Don't miss the affordable performance of this expedition bike.

- Chromoly main tubes and fork reduce weight and maximize frame strength.
- Shimano Alivio rear changer and Gripshift 21-speed shifters.
- Lightweight and durable alloy rims with quick-release front and rear hubs.
- Stop confidently with Shimano C-90 cantilever brakes.
- Enjoy comfortable upright riding with an adjustable rise stem and supersoft saddle.

Strikine

Terrene

A truly versatile bike with a unique blend of road and expedition components.

- Lightweight aluminum frame and chromoly fork, fully accessorized for mounting racks and bottle cages.
- Shimano RSX 21-speed STI shifter and brake lever combination, with a Shimano Deore XT rear changer.
- Truly a custom fit with alloy drop bars and adjustable rise stem.
- Easy reliable shifting with Shimano RSX triple cranks and cartridge bottom bracket.
- Rugged Araya TX-350 double-wall rims and smooth rolling 700x35c tires.

A high performance touring and expedition bike for the discerning cyclist.

- Premium quality expedition frame with chromoly main tubes, seat stays and forks.
- Low rider rack mounts on the front fork.
- 21-speed Shimano RSX STI drive train with an STX rear changer for fast, hesitation free, shifts.
- Powerful Shimano C-90 cantilever brakes.
- Rugged double-wall Araya TX-350 rims, Shimano hubs and smooth rolling 700x35c tires.

TECH STUFF

MARZOCCHI

The 1998 Bombers are here and they are better than ever! Marzocchi has drastically reduced the weight over the entire line while still maintaining the strength, durability and reliability, and performance that the bomber's have become famous for.

The 1998 Bombers feature "BAM" (Bomber Aerospace Material) technology. The "BAM" material allows the use of a thinner wall thickness, and produces a fork that is lighter and stronger than those made with magnesium.

Also new on the JR. T, Atom Bomb and Z-2 BAM is the new negative travel design. Negative travel allows the fork to sit further into it's travel without taking up the overall travel amount. On high speed terrain where the rider un-weights the bike, floating over bumps and risers the fork extends into it's negative travel giving the rider up to 10 mm more travel for incredible shock absorption and comfort.

JR. T

- Triple clamp design provides the ultimate in torsional rigidity.
- speed sensitive piston rod valving and negative travel design provides superior performance over a wide range of terrain.
- light weight alloy stanchions, with "BAM" lower legs and crown
- 110 mm travel, 2087 g (4.6 lbs), with disc brake mounts.

Z-2 ATOM BOMB

- The lightest fork in the 1998 Bomber line up 1542g, (3.4lbs).
- Single hydraulic cartridge with ultra wide range adjustability and new negative travel design.
- Ultra light "BAM" crown, and lower legs with an Easton E70 steer tube.
- Torsionally rigid arch design with offset bolt pattern.
- 75 mm travel, no disc brake mounts.

Z-2 BAM

- Norco uses the Z-2 BAM with the optional Easton E70 steer tube. This keeps the weight close to the Atom Bomb with the added feature of disc brake mounts.
- Single hydraulic cartridge with ultra wide range adjustability and negative travel design.
- Externally adjustable preload with lower profile knobs for better frame clearance.
- Speed sensitive valving for predictable compression and rebound.
- 75 mm travel, with disk brake mounts.

Z-3 LIGHT

- Speed sensitive piston rod valving tunable for a wide range of terrain.
- Light weight Easton E 70 steer tube, "BAM" crown and lower legs.
- 65 mm travel, 1633 g (3.6 lbs), no disc brake mounts.

ROCK SHOX

Judy T-2

- Torsionally rigid monocoque magnesium lower tube assembly.
- Type 2 spring system utilizing a mcu/ coil spring combination in a stiction reducing oil bath.
- Upgradeable to a Judy XC with a cartridge and spring kit.
- External preload adjusters for easy tuning.
- 63 mm travel, 1450 g (3.25 lbs), no disc mounts.

Indy C

- Type 2 spring system utilizing a mcu/ coil spring combination in a stiction free oil bath.
- One piece magnesium lower tube assembly resists torsional flex and keeps you on line through the tight turns.
- Improved tire and mud clearance.
- Redesigned adjuster knobs for easy trail side tuning.
- 63 mm travel, 1450 g (3.25 lbs).

Indy S

- Super plush elastomer spring system in an oil bath to reduce stiction.
- Torsionally rigid one piece magnesium lower tube assembly.
- Redesigned to deliver increased tire and mud clearance.
- 50 mm travel, 1500 g (3.3 lbs).

Rock shox rear shocks

The Rock Shox rear shocks on the VPS series have been custom tuned with the engineers at Rock Shock to get the most out of our full suspension designs.

Coupe Deluxe

- 6.5 inch version with 1.5 inches stroke.
- Super plush 700 lb silicon steel spring
- Indexed rebound damping adjustment.
- Adjustable preload.

Strut Deluxe

- Super stiff strut design resist side to side flex.
- Super plush silicon steel spring
- Adjustable preload.

TUBING

REYNOLDS

Reynolds has built on the success of their 853 tubing and developed a complete new line of steel tube sets.

Norco continues to use the air hardened 853 tube sets on our Team Issue. Unlike other steels, this alloy actually increases in strength in the critical joint areas as it cools from welding. This heat treated material delivers outstanding fatigue life, damage resistance, and ultra low weight.

The 1998 Rampage utilizes the new air hardened Reynolds 631 tube set. Like 853 the 631 material increases in strength at the joints after welding. It has an ultra high tensile strength and fatigue life and is comparable in weight to 853.

The Norco Sasquatch now uses Reynolds 525 frame tubes. The double butted 525 chromoly is seamless for improved strength. It provides a lively and compliant ride with an outstanding fatigue life.

EASTON

Easton continues to be the worlds leader in aluminum bicycle frame tubing. Easton taperwall tubes have been engineered to be light and strong. Weight reduction and a lively, resilient ride feel has made easton one of the most popular materials for high performance, competition frame sets.

All Norco aluminum frames use replaceable rear derailleur hangers. They are designed to breakaway in the result of an accident or crash. This saves you from an expensive frame repair or replacement.

Norco hardtail mountain bikes all benefit from our "AFS" AntiFlex Seat stays. The curved stays resist lateral flex and brake stud deflection associated with today's powerful V-Brake system. They are more than 15% stiffer than standard stays and result in more responsive braking performance.

GRIPSHIFT:

Gripshift has further refined their "ESP" shifting systems for 1998.

The 1:1 actuation ratio results in faster cable pull, and therefore, faster more accurate shifts under load. The new 9.0 SL found on the team issue and VPS-1 have evolved with improved durability, and a secondary power spring for more defined positive shifts.

Gripshift has improved the ergonomics of all "ESP" and "SRT" shifters for 1998 for added comfort, control and shifting response.

V-BRAKES:

A few years ago Shimano set a new standard for braking performance with the release of their V-Brake technology. Norco has made wide use of V-Brakes throughout the 1998 line of bikes.

V-Brakes provide better modulation, and significantly more power than cantilever style brakes resulting in improved safety and overall braking performance.

The XTR and XT V-Brakes use a parallel push system which keeps the pads square to the rim through their full range of motion. This results in maximum pad contact with the rim and unparalleled stopping power.

New for 1998, the NEXAVE and M280 V-Brakes feature a built in power modulator. This unique feature is adjustable, and varies the power output of the brake. These are used primarily on expedition bikes, where traditional V-Brakes may be too powerful in certain situations.

Geometry: Full Suspension & Competition

Full suspension:

What is VPS? Answer: "Variable Point Suspension"

The 1998 VPS full suspension bikes from norco provide a multitude of performance tuning options. Dial in the bike for the terrain you are riding by varying the mounting position of the shock in the frame; this alters angles, rear wheel travel, and bb height. Tuning your full suspension bike has never been simpler.

• VPS-1

Performance characteristics and tuning.

Hole "a": hole "a" provides 5.5 inches of rear wheel travel and is best suited for free riding and descending. It provides the highest bb clear-

ance, and should be tuned with fork and rear shock sag.

Hole "b": hole "b" provides 4.1 inches of rear wheel travel and is best suited for cross country and all round riding conditions. It should be tuned with less fork and rear shock sag.

• VPS-2/VPS-3

Performance characteristics and tuning.

Hole "a": hole "a" provides the most rear wheel travel, and highest bottom bracket clearance. This position is best suited for riders who focus on rougher terrain and descending and should be tuned with ample rear shock sag.

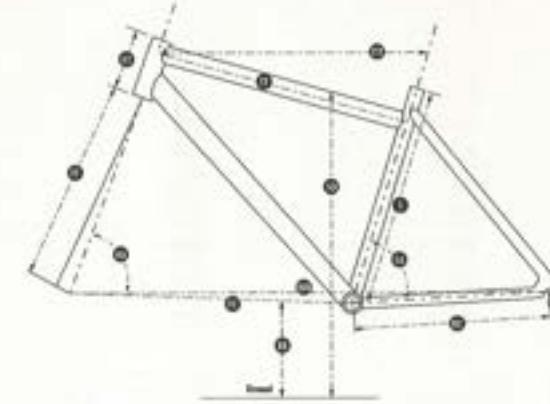

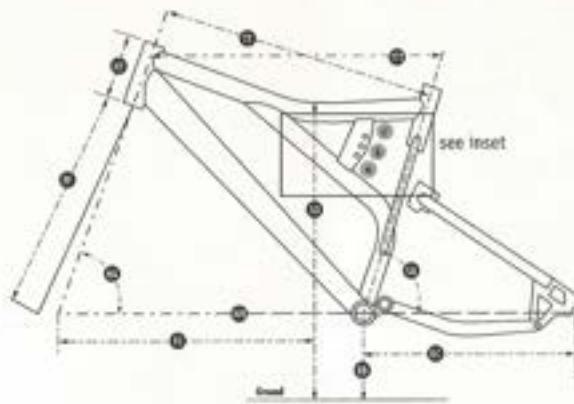

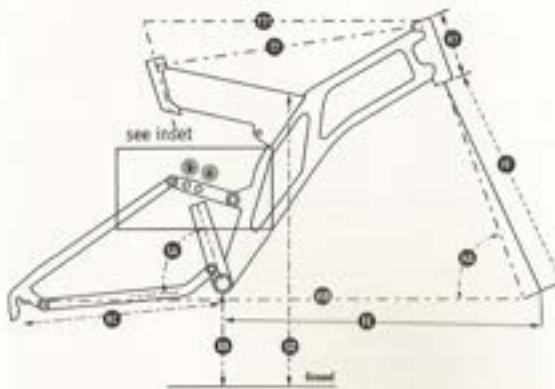

Hole "b": hole "b" is best suited for all round riding with an equal focus

on climbing and descending. It should be tuned with some rear shock sag.

Hole "c": hole "c" is the ideal position for cross country applications. It should be tuned with minimal sag to maintain a performance oriented head tube angle, and will provide a more stable ride due to the lower bottom bracket height.

Hard tails:

Norco hard tail designs have evolved from years of racing and riding in the rugged west coast mountains. They are differentiated from others by their taller bottom brackets, long top tubes, and long head tubes. The result is a frame that delivers the handling and control required to tackle the world cup circuit, as well as your favorite local trails.

Does your
mechanisms designed for escape
from the mundane and routine
despair from time
into the wild and wonderful.

There is a way to nirvana.

Find the place for your voice.
here is your ride.
