AXIS BOLD AS TI

We picked up this titanium stem from Axis at Interbike. The quills and clamps are machined from 6al/4v titanium, while the risers are formed from certified 3al/2.5v tubing. The clamp and binder are one piece, machined from a solid round of 6/4 titanium. All Axis stems are precision align-bored after welding for proper alignment and full circumference clamping surface. Graced with immaculate welds, our sample stem weighed in at 226 grams (including the ti expander bolt). Available on a custom order basis, the stems come in mountain or road styles. Quill-type stems are supplied with titanium expander bolts. Delivery time is two weeks. To order, call (415) 927-1871. Know the type of stem, steerer size, handlebar size, extension length, and degree of rise. Expect to pay \$264 for a quill-type stem and \$280 for an AheadSet-style stem.

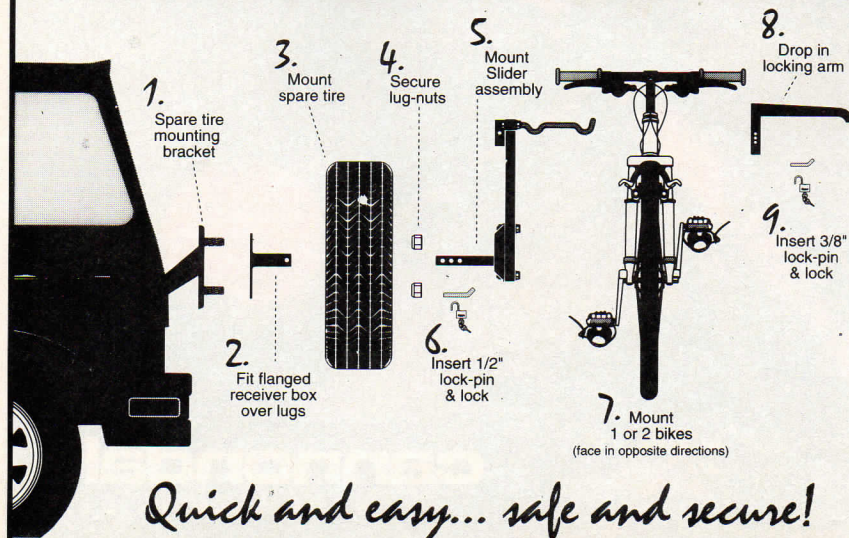

RUBBER AIME?

New from A'ME is the Tri Star grip made of 100 percent Vulcathane rubber. Developed by A'ME, this rubber compound provides great feel and durability. The low profile design is made to help eliminate hand fatigue associated with larger diameter grips. The grips' extra-long design can easily be trimmed to fit any application (such as Grip Shift shifters). And the grips' wire grooves allow the grips to, uh, get a good grip! Made in a variety of colors, including clear and clear tints, Tri Star grips retail for \$5.95 a pair. For more info, call (909) 594-1767. Tell 'em you heard about the grips from us!

The Bike Slider ST™

Quick and easy... safe and secure!

mounts to your spare tire carrier as easy as if were a trailer hitch.

The mounting plate stays in between the tire and the bracket. The bikes are always centered to the vehicle because the cross arm can be adjusted from left to right, depending where the tire is. The height can also be adjusted to accommodate a full size Bronco or a small Suzuki SideKick. Of course it has the usual Lock Arm™ that secures the bicycles into the carrier that the original Bike Slider™ offers... *without a hitch!*
